The Neuropsychology of Individual Differences Lawrence C. Hartlage, Cathy F. Telzrow, 2013-11-11

The Neuropsychology of Individual Differences A Developmental Perspective was designed to simplify the complexities and subtleties of neurologically based differences in human beings By conceptualizing and presenting subject matter in a developmental sequence we hoped to emphasize the inseparable union between the science of neuropsychology and the study of human behavior Following a brief introductory chapter the volume opens with chapters concerning critical preliminary questions such as establishing a foundation and rationale for a neuropsychological basis for individual differences and consideration of important methodological issues It proceeds with discussions of the role of neuropsychology in the individual's efforts to organize the world via such basic means as perception and temperament Three chapters follow that discuss individual differences in higher cortical functions cognitive ability language and learning Neuropsychological differences between the sexes and in the expression of psychopathological and neurological conditions comprise the topics for the next three chapters The final topical chapter provides a discussion of rehabilitation of neurological disorders in children and the volume concludes with a synthesis of all contributions

The Mythomanias Michael S. Myslobodsky, 2013-06-17 Recently there has been a renewal of interest in the broad and loosely bounded range of phenomena called deception and self deception This volume addresses this interest shared by philosophers social and clinical psychologists and more recently neuroscientists and cognitive scientists Expert contributors provide timely reliable and insightful coverage of the normal range of errors in perception memory and behavior They place these phenomena on a continuum with various syndromes and neuropsychiatric diseases where falsehood in perception self perception cognition and behaviors are a peculiar sign Leading authorities examine the various forms of mythomania deception and self deception ranging from the mundane to the bizarre such as imposture confabulations minimization of symptomatology denial and anosognosia Although the many diverse phenomena discussed here share a family resemblance they are unlikely to have a common neurological machinery In order to reach an explanation for these phenomena a reliable pattern of lawful behavior must be delineated It would then be possible to develop reasonable explanations based upon the underlying neurobiological processes that give rise to deficiencies designated as the mythomanias The chapters herein begin to provide an outline of such a development Taken as a whole the collection is consistent with the emerging gospel indicating that neither the machinery of nature nor the forces of nurture taken alone are capable of explaining what makes cognition and behaviors aberrant
