Bullsh*t Comparisons Andrew Brooks, 2024-03-28 Life is complicated comparisons are easy We consume enormous quantities of information every day from sources that are reliable and those less trustworthy including journalists politicians friends and social media One of the most common tools we use to communicate is comparison Are we suffering a hurricane of migrants Do dogs look like their owners Is Oxford better than Harvard Metaphors models and metrics are used to compare anything from schools to wars to iconic people But how helpful are they What truths do they hide and what bullsh*t do comparisons propagate Looking across a fascinating range of situations both familiar and unfamiliar serious and light hearted Bullsh*t Comparisons is a ground breaking guide to the role of could be true but misleading comparisons It is illuminated by examples spanning the globe from university league tables to childhood rivalries politicians tawdry analogies the FIFA World Footballer of the year award and Chinese neo colonialism in Africa Ideal for anyone interested in critical thinking or who simply wants to be able to spot bullsh*t at twenty paces this thought provoking intelligent and often amusing book will challenge you to think critically about the use of comparison *Electric Vehicles In Shared Fleets: Mobility Management, Business Models, And Decision Support Systems* Kenan Degirmenci, Thomas M Cerbe, Wolfgang E

Pfau, 2022-04-28 The electrification of shared fleets offers numerous benefits including the reduction of local emissions of pollutants which leads to ecological improvements such as the improvement of air quality Electric Vehicles in Shared Fleets considers a holistic concept for a socio technical system with a focus on three core areas integrated mobility solutions business models for economic viability and information systems that support decision making for the successful implementation and operation of electric vehicles in shared fleets In this book we examine different aspects within these areas including multimodal mobility grid integration of electric vehicles shared autonomous electric vehicle services relocation strategies in shared fleets and the challenge of battery life of electric vehicles Insights into the future of transport are provided which is predicted to be shared autonomous and electric This will require the expansion of the charging infrastructure to provide adequate premises for the electrification of transportation and to create market demand **The**

Electric Vehicle Gijs Mom, 2013-02-15 Winner of the Engineer Historian Award from the International History and Heritage Committee of the American Society of Mechanical Engineers and the Nicholas Joseph Cugnot Award given by the Society of Automotive Historians Recent attention to hybrid cars that run on both gasoline and electric batteries has made the electric car an apparent alternative to the internal combustion engine and its attendant environmental costs and geopolitical implications Few people realize that the electric car neither a recent invention nor a historical curiosity has a story as old as that of the gasoline powered automobile and that at one time many in the nascent automobile industry believed battery powered engines would become the dominant technology In both Europe and America electric cars and trucks succeeded in meeting the needs of a wide range of consumers Before World War II as many as 30 000 electric cars and more than 10 000

electric trucks plied American roads European cities were busy with electrically propelled fire engines taxis delivery vans buses heavy trucks and private cars Even so throughout the century long history of electric propulsion the widespread conviction it was an inferior technology remained stubbornly in place an assumption mirrored in popular and scholarly memory In *The Electric Vehicle* Gijs Mom challenges this view arguing that at the beginning of the automobile age neither the internal combustion engine nor the battery powered vehicle enjoyed a clear advantage He explores the technology and marketing consumer ratio faction relationship over four generations of electric vehicle design with separate chapters on privately owned passenger cars and commercial vehicles Mom makes comparisons among European countries and between Europe and America He finds that the electric vehicle offered many advantages among them greater reliability and control less noise and pollution He also argues that a nexus of factors cultural underpowered and less rugged electric cars seemed feminine at a time when most car buyers were men structural the shortcomings of battery technology at the time and systemic the infrastructural problems of changing large numbers of batteries ultimately gave an edge to the internal combustion engine One hopes as a new generation of electric vehicles becomes a reality *The Electric Vehicle* offers a long overdue reassessment of the place of this technology in the history of street transportation
