Power and Performance Jim Kukunas, 2015-04-27 Power and Performance Software Analysis and Optimization is a guide to solving performance problems in modern Linux systems. Power efficient chips are no help if the software those chips run on is inefficient. Starting with the necessary architectural background as a foundation, the book demonstrates the proper usage of performance analysis tools in order to pinpoint the cause of performance problems and includes best practices for handling common performance issues. Those tools identify and provide an expert perspective from a key member of Intel's optimization team on how processors and memory systems influence performance. Presents ideas to improve architectures running on mobile, desktop or enterprise platforms. Demonstrates best practices for designing experiments and benchmarking throughout the software lifecycle. Explains the importance of profiling and measurement to determine the source of performance issues.

Hardware Description Languages and their Applications Carlos Delgado Kloos, Eduard Cerny, 2013-06-05 In the past few decades, Computer Hardware Description Languages (CHDLs) have been a rapidly expanding subject area due to a number of factors including the advancing complexity of digital electronics, the increasing prevalence of generic and programmable components of software hardware, and the migration of VLSI design to high level synthesis based on HDLs. Currently, the subject has reached the consolidation phase in which languages and standards are being increasingly used at the same time as the scope is being broadened to additional application areas. This book presents the latest developments in this area and provides a forum from which readers can learn from the past and look forward to what the future holds.
