Polymeric Materials For Unusual Service:

Polymers Carole A. Daniels, 1989-11-20 A concise illustrated presentation of polymer structure and bonding The well constructed organization and index make the book readily usable as a reference book Those who read the entire text will be well rewarded with a solid understanding of the fundamentals of polymer properties and possible applications This book will most certainly remain a valuable reference for years to come

Structure—Property Relationships in Polymers Charles E. Carraher Jr., R.B. Seymour, 2012-12-06 The first concern of scientists who are interested in synthetic polymers has always been and still is How are they synthesized But right after this comes the question What have I made and for what is it good This leads to the important topic of the structure property relations to which this book is devoted Polymers are very large and very complicated systems their characterization has to begin with the chemical composition configuration and conformation of the individual molecule The first chapter is devoted to this broad objective The immediate physical consequences discussed in the second chapter form the basis for the physical nature of polymers the supermolecular interactions and arrangements of the individual macromolecules The third chapter deals with the important question How are these chemical and physical structures experimentally determined The existing methods for polymer characterization are enumerated and discussed in this chapter The following chapters go into more detail For most applications textiles films molded or extruded objects of all kinds the mechanical and the thermal behaviors of polymers are of preponderant importance followed by optical and electric properties Chapters 4 through 9 describe how such properties are rooted in and dependent on the chemical structure More detailed considerations are given to certain particularly important and critical properties such as the solubility and permeability of polymeric systems Macromolecules are not always the final goal of the chemist they may act as intermediates reactants or catalysts This topic is presented in Chapters 10 and 11

Novel Polymeric Materials For Environmental Applications Paramita Das, Subhasis Das, 2023-03-21 Polymeric materials play an essential and ubiquitous role in many fields including structural and packaging materials drug development tissue engineering wastewater treatment pollutant removal separation water purification smart agriculture and even road and building construction This book contains eleven comprehensive chapters covering topics from deriving polymers from natural resources or wastes to developing novel functional polymeric materials in the form of membranes hydrogels foams nanocomposites for various environmental applications This book also discusses the utilization of waste plastics and the challenges and progress made in recycling and reusing commercially viable polymers Such information is valuable and accelerates technological progress Each chapter further gives the current fabrication methodology challenges and future scope of these materials related to their environmental applications Thus anyone working on polymer based materials will benefit from the comprehensive knowledge presented in this book on novel polymeric materials and their various environmental applications

Vegetable Oil-Based

Composites Showkat Ahmad Bhawani, Anish Khan, Mohmad Nasir Mohmad Ibrahim, Mohammad Jawaid, 2024-03-21 This book presents the latest developments in the field of vegetable oil based composites. It focuses on different vegetable oils such as castor, linseed, corn, soybean, olive, palm, and canola oils and fillers from inorganic materials and agricultural residues used in the preparation of vegetable oil based composites. There are several advantages to vegetable oil based polymer composites due to their universal availability, inherent biodegradability, low price, and superb environmental credentials, i.e., low eco-toxicity and low toxicity towards humans. This book will be of interest to researchers working in the field of bio-based composite materials for the development of green and sustainable materials.
