Polysaccharides I Thomas Heinze, 2005-11-02 **An Introduction to Polysaccharide Biotechnology** Stephen E. Harding, Michael P. Tombs, Gary G. Adams, Berit Smestad Paulsen, Kari Tvete Inngjerdningen, Hilde Barsett, 2017-03-16

Polysaccharides and related high molecular weight glycans are hugely diverse with wide application in Biotechnology and great opportunities for further exploitation An Introduction to Polysaccharide Biotechnology a second edition of the popular original text by Tombs and Harding introduces students researchers clinicians and industrialists to the properties of some of the key materials involved how these are applied some of the economic factors concerning their production and how they are characterized for regulatory purposes Degradable Polymers and Materials Kishan C. Khemani, Carmen Scholz, 2006 This book is an excellent guide to biobased and biodegradable polymeric materials It summarizes current knowledge on polymer degradation mechanisms and provides insight into recent state of the art syntheses of bio degradable polymers The book captures the shift that is currently observed in polymer industries which takes the industry from a strict petroleum based business to an industry that starts to incorporate biobased raw materials and seeks actively to manufacture materials that are environmentally benign The book describes various aspects of current polymer research with special emphasis on natural polymers syntheses and modifications of polyesters and characterization technologies that allow to elucidate degradation mechanisms The understanding of polymer degradation is not limited anymore to hydrolytic processes this book captures new approaches to the degradation of plastic materials ranging from photodegradation to the regulation of genes of polymer degrading microorganisms A profound part of the book is dedicated to poly lactic acid a polymer that is now produced in large scale from renewable resources the modification copolymerization application and engineering of this material is discussed in detail and a comprehensive review is provided *Therapeutic Foods* Alexandru Mihai Grumezescu, Alina Maria Holban, 2017-09-23 Therapeutic Foods Volume 8 in the Handbook of Food Bioengineering series is an essential resource for anyone investigating foods that may be utilized as therapeutic agents Plants and animal products have been utilized since ancient times as medicine to treat diseases and the properties within foods and ingredients are still investigated for food therapy and prophylaxis The book is a comprehensive resource for researchers and scientists already in the field or those just entering It covers many spices plant extracts essential oils and vegetal mixtures that have immune stimulatory effects and can be efficiently utilized in the treatment of infections and cancer Presents introductory chapters for background and practical examples of therapeutic foods used in different diseases to aid in research Provides scientific methods to help eliminate food spoilage and bacterial contamination in food packaging Includes benefits of the applications of functional properties of food and food ingredients to benefit health and well being **Advanced Biophysical Techniques for Polysaccharides Characterization** Nirmal Mazumder, 2024-06-14 Advanced Biophysical Techniques for Polysaccharides Characterization offers a detailed insight into the cutting edge techniques available for the identification quantification

characterization and structural analysis of polysaccharides A wide range of techniques are covered including scanning electron microscopy SEM atomic force microscopy AFM optical microscopy non linear optical microscopy and spectroscopic techniques like Fourier transform Infrared FTIR X ray diffraction light scattering and nuclear magnetic resonance NMR Dynamic Nuclear Polarization and TEM techniques are also considered Various polysaccharides are investigated along with their applications across a range of industries Each chapter offers a detailed description of the techniques before delving into case studies covering the latest advances This book provides a one stop solution to the latest advanced microscopic and spectroscopic techniques for investigating a range of important polysaccharides and is an ideal reference for researchers in the field of biophysics molecular biology biochemistry pharmaceuticals food chemistry and related areas Covers a range of biophysical techniques for polysaccharide analysis including NMR Dynamic Nuclear Polarization mass spectrometry approaches X ray diffraction light scattering and TEM techniques Investigates an array of polysaccharides such as glycogen xanthan hyaluronan and more Includes an introduction to the sources types and benefits of polysaccharide Considers applications of polysaccharides in various industries including biomedicine pharmaceuticals and the food industry

Physico-chemical Aspects of Textile Coloration Stephen M.

Burkinshaw,2016-02-08 The production of textile materials comprises a very large and complex global industry that utilises a diverse range of fibre types and creates a variety of textile products As the great majority of such products are coloured

predominantly using aqueous dyeing processes the coloration of textiles is a large scale global business in which complex procedures are used to apply different types of dye to the various types of textile material The development of such dyeing processes is the result of substantial research activity undertaken over many decades into the physico chemical aspects of dye adsorption and the establishment of dyeing theory which seeks to describe the mechanism by which dyes interact with textile fibres Physico Chemical Aspects of Textile Coloration provides a comprehensive treatment of the physical chemistry involved in the dyeing of the major types of natural man made and synthetic fibres with the principal types of dye The book covers fundamental aspects of the physical and chemical structure of both fibres and dyes together with the structure and properties of water in relation to dyeing dyeing as an area of study as well as the terminology employed in dyeing technology and science contemporary views of intermolecular forces and the nature of the interactions that can occur between dyes and fibres at a molecular level fundamental principles involved in dyeing theory as represented by the thermodynamics and kinetics of dye sorption detailed accounts of the mechanism of dyeing that applies to cotton and other cellulosic fibres polyester polyamide wool polyacrylonitrile and silk fibres non aqueous dyeing as represented by the use of air organic solvents and supercritical CO₂ fluid as alternatives to water as application medium The up to date text is supported by a large number of tables figures and illustrations as well as footnotes and widespread use of references to published work The book is essential reading for students teachers researchers and professionals involved in textile coloration
