Quasiconformal Teichmüller Theory:

Quasiconformal Teichmüller Theory Frederick P. Gardiner, Nikola Lakic, 2000 The Teichmüller space $T(X)$ is the space of marked conformal structures on a given quasiconformal surface X . This volume uses quasiconformal mapping to give a unified and up to date treatment of $T(X)$. Emphasis is placed on parts of the theory applicable to noncompact surfaces and to surfaces possibly of infinite analytic type. The book provides a treatment of deformations of complex structures on infinite Riemann surfaces and gives background for further research in many areas. These include applications to fractal geometry to three dimensional manifolds through its relationship to Kleinian groups and to one dimensional dynamics through its relationship to quasimetric mappings. Many research problems in the application of function theory to geometry and dynamics are suggested.

Quasiconformal Maps and Teichmüller Theory Alastair Fletcher, Vladimir Markovic, 2007 Publisher description
The Geometry of Riemann Surfaces and Abelian Varieties José María Muñoz Porras, 2006 Most of the papers in this book deal with the theory of Riemann surfaces moduli problems automorphisms etc abelian varieties theta functions and modular forms. Some of the papers contain surveys on the recent results in the topics of current interest to mathematicians whereas others contain new research results.

Lie Algebras, Vertex Operator Algebras, and Related Topics Katrina Barron, Elizabeth Jurisich, Antun Milas, Kailash Misra, 2017-08-15 This volume contains the proceedings of the conference on Lie Algebras Vertex Operator Algebras and Related Topics celebrating the 70th birthday of James Lepowsky and Robert Wilson held from August 14-18 2015 at the University of Notre Dame Notre Dame Indiana. Since their seminal work in the 1970s Lepowsky and Wilson their collaborators their students and those inspired by their work have developed an amazing body of work intertwining the fields of Lie algebras vertex algebras number theory theoretical physics quantum groups the representation theory of finite simple groups and more. The papers presented here include recent results and descriptions of ongoing research initiatives representing the broad influence and deep connections brought about by the work of Lepowsky and Wilson and include a contribution by Yi Zhi Huang summarizing some major open problems in these areas in particular as they pertain to two dimensional conformal field theory.

Dynamics of Circle Mappings Edson de Faria, Pablo Guarino, 2024-10-16 This book explores recent developments in the dynamics of invertible circle maps a rich and captivating topic in one dimensional dynamics. It focuses on two main classes of invertible dynamical systems on the circle: global diffeomorphisms and smooth homeomorphisms with critical points. The latter is the book's core reflecting the authors' recent research interests. Organized into four parts and 14 chapters the content covers rigid rotations circle homeomorphisms and the concept of rotation number in the first part. The second part delves into circle diffeomorphisms presenting classical results. The third part introduces multicritical circle maps smooth homeomorphisms of the circle with a finite number of critical points. The fourth and final part centers on renormalization theory analyzing the fine geometric structure of orbits of multicritical circle maps. Complete proofs for several fundamental results in circle dynamics are provided throughout. The

book concludes with a list of open questions Primarily intended for graduate students and young researchers in dynamical systems this book is also suitable for mathematicians from other fields with an interest in the subject Prerequisites include familiarity with the content of a standard graduate course in real analysis along with some understanding of ergodic theory and dynamical systems Basic knowledge of complex analysis is needed for specific chapters

Lectures on Quasiconformal Mappings Lars Valerian Ahlfors,2006-07-14 Lars Ahlfors s Lectures on Quasiconformal Mappings based on a course he gave at Harvard University in the spring term of 1964 was first published in 1966 and was soon recognized as the classic it was shortly destined to become These lectures develop the theory of quasiconformal mappings from scratch give a self contained treatment of the Beltrami equation and cover the basic properties of Teichmüller spaces including the Bers embedding and the Teichmüller curve It is remarkable how Ahlfors goes straight to the heart of the matter presenting major results with a minimum set of prerequisites Many graduate students and other mathematicians have learned the foundations of the theories of quasiconformal mappings and Teichmüller spaces from these lecture notes This edition includes three new chapters The first written by Earle and Kra describes further developments in the theory of Teichmüller spaces and provides many references to the vast literature on Teichmüller spaces and quasiconformal mappings The second by Shishikura describes how quasiconformal mappings have revitalized the subject of complex dynamics The third by Hubbard illustrates the role of these mappings in Thurston s theory of hyperbolic structures on 3 manifolds Together these three new chapters exhibit the continuing vitality and importance of the theory of quasiconformal mappings
