Rural Energy and Development ,1996-01-01 FIAS Occasional Paper No 7 Examines foreign direct investment in infrastructure in Central and Eastern Europe *Rural Energy and Development* Banco Mundial,1996 International Energy Governance Rafael Leal-Arcas,Andrew Filis,Ehab S. Abu Gosh,2014-11-28 Selected legal deficiencies relating to international energy governance are identified in this salient book The currently fragmented and multi layered international energy governance regime is exposed and reviewed If governance were streamlined for **Under Pressure** Jen Schneider,Steve Schwarze,Peter K. Bsumek,Jennifer Peeples,2016-05-10 This book examines five rhetorical strategies used by the US coal industry to advance its interests in the face of growing economic and environmental pressures industrial apocalyptic corporate ventriloquism technological shell game hypocrite s trap and energy utopia The authors argue that these strategies appeal to and reinforce neoliberalism a discourse and set of practices that privilege market rationality and individual freedom and responsibility above all else As the coal industry has become the leading target and leverage point for those seeking more aggressive action to mitigate climate change their corporate advocacy may foreshadow rhetorical strategies available to other fossil fuel industries as they manage similar economic and cultural shifts The authors analysis of coal s corporate advocacy also identifies contradictions and points of vulnerability in the organized resistance to climate action as well as the larger ideological formation of neoliberalism **Handbuch der Entwicklungshilfe, Fortsetzungswerk in Loseblattform** Heinrich Rieber,1960 **Climate Change 2001: Mitigation** Bert Metz,2001-07-12 Climate Change 2001 Mitigation is the most comprehensive and up to date scientific technical and economic assessment of options to mitigate climate change and their costs The report Makes clear there are strong inter linkages between climate change policy and policies towards sustainable development Assesses information on technological options to reduce greenhouse gas emissions or enhance their sinks Analyses technologies and practices available to achieve the targets of the Kyoto Protocol and stabilise atmospheric concentrations of greenhouse gases Evaluates barriers impeding implementation of these options and methods available to overcome them Summarises the economic literature on costs of climate change mitigation at global regional and national levels Evaluates the other benefits that climate policy can deliver or the climate benefits of other socio economic policies Assesses how this information can be used to support climate policy decision making acknowledging various decision making frameworks This latest IPCC assessment will again form the standard scientific reference for all concerned with climate change and who want to be informed of ways to address this important global problem including students and researchers in environmental and social sciences and policymakers and analysts in governmental and non governmental organisations and the private sector world wide **International Economic Law after the Global Crisis** Chin Lim,C. L. Lim,Bryan Mercurio,2015-04-30 This collection explores the theme of fragmentation within international economic law following the global financial crisis Low-Enthalpy Geothermal Resources for Power

Generation D. Chandrasekharam, Jochen Bundschuh, 2008-07-01 In many developing countries the exponentially growing electricity demand can be covered by using locally available sustainable low enthalpy geothermal resources 80 150 C Such low enthalpy sources can make electricity generation more independent from oil imports or from the over dependence on hydropower Until now this huge energy resource has only been used by some developed countries like the USA Iceland and New Zealand The reason why low enthalpy geothermal resources are not used for electricity generation is that there is still a misconception that low enthalpy thermal fluids are fit only for direct application The advancement of drilling technology development of efficient heat exchangers and deployment of high sensitive binary fluids contribute to the useful application of this energy resource on a much wider scale This book focuses on all aspects of low enthalpy geothermal thermal fluids It will be an important source book for all scientists working on geothermal energy development Specifically those involved in research in developing countries rich in such thermal resources and for agencies involved in bilateral and international cooperation

**World Development Report**, 1998 The report analyzes the risks and opportunities that the global information revolution is creating for developing countries and concludes that access to financial technical and medical knowledge is crucial to improving the health and living standards of the poor The report focuses on two types of knowledge and two types of problems that are critical for developing countries How to knowledge such as nutrition birth control engineering or accounting Typically developing countries have less know how than industrial countries and poor people have less know how than wealthier people The report argues that closing these knowledge gaps for example through education better phone systems and openness to exchanges with foreign countries including trade can do much to help the world's poorest people to improve their lives Second knowledge about attributes or characteristics such as the quality of a product diligence of a worker or creditworthiness of a firm The report describes this lack of knowledge as information problems and argues that

this in turn leads to market failures such as lenders refusal to offer loans to poor people because of the difficulty in assessing their ability to repay      **West Africa** ,2000      **71st Annual Discussion and Debate Source Book** ,1997      *Electricity Services in Remote Rural Communities* Teodoro Sanchez Campos,2006 Describes the design and use of a particular management model for electricity services in isolated rural communities This book describes an innovative model for the organization of electricity services developed and tested by Practical Action as part of its research and development into access to electricity services in remote rural areas and the sustainability of these services This small enterprise model was designed with the clear objective of ensuring efficient financial and technical management to take into account the social and economic environment and to encourage the committed participation of the community The concept of private management is introduced where a micro enterprise is responsible for the running of the system and receives payment in exchange for the management of the service To date the model has been piloted in five small hydroelectric plants in the north of Peru with very positive results It is proposed that this model could also be used successfully in other energy generating systems diesel solar wind powered with only minor changes This book will be of interest to all stakeholders in rural electrification rural electrification organizations at government and private level researchers on sustainable energy implementers of rural energy schemes policy makers and also students and teachers of courses related to rural energy      **Asiatische Studien** ,2002
