The Voice Catchers Joseph Turow, 2021-05-18 Your voice as biometric data and how marketers are using it to manipulate you

Only three decades ago it was inconceivable that virtually entire populations would be carrying around wireless phones wherever they went or that peoples exact locations could be tracked by those devices

We now take both for granted

Even just a decade ago the idea that individuals voices could be used to identify and draw inferences about them as they shopped or interacted with retailers seemed like something out of a science fiction novel

Yet a new business sector is emerging to do exactly that

The first in depth examination of the voice intelligence industry

The Voice Catchers exposes how artificial intelligence is enabling personalized marketing and discrimination through voice analysis

Amazon and Google have numerous patents pertaining to voice profiling and even now their smart speakers are extracting and using voice prints for identification and more

Customer service centers are already approaching every caller based on what they conclude a caller s voice reveals about that person s emotions sentiments and personality often in real time

In fact many scientists believe that a person s weight height age and race not to mention any illnesses they may have can also be identified from the sound of that individual s voice

Ultimately not only marketers but also politicians and governments may use voice profiling to infer personal characteristics for selfish interests and not for the benefit of a citizen or of society as a whole

Leading communications scholar Joseph Turow places the voice intelligence

industry in historical perspective explores its contemporary developments and offers a clarion call for regulating this rising surveillance regime
