Julie Jennings

Plundered Seas:

The Plundered Seas Michael Berrill, 1997 Biologist Michael Berrill explores this simmering crisis with thoroughness and authority *The Plundered Seas* opens with a lucid overview of world fisheries and their historical pattern of discovery exploitation depletion and death Berrill goes on to survey the evolution of international laws governing exclusive fishing zones the efforts at governmental regulation of the fiercely independent industry the problems with predicting stock size and the connected implications for management

Oceaning Adam Fish, 2024-01-19 Drones are revolutionizing ocean conservation By flying closer and seeing more drones enhance intimate contact between ocean scientists and activists and marine life In the process new dependencies between nature technology and humans emerge and a paradox becomes apparent Can we have a wild ocean whose survival is reliant upon technology In *Oceaning* Adam Fish answers this question through eight stories of piloting drones to stop the killing of porpoises sharks and seabirds and to check the vitality of whales seals turtles and coral reefs Drone conservation is not the end of nature Instead drone conservation results in an ocean whose flourishing both depends upon and escapes the control of technologies Faulty technology oceanic and atmospheric turbulence political corruption and the inadequacies of basic science serve to foil governance over nature Fish contends that what emerges is an ocean culture a flourishing ocean that is distinct from but exists alongside humanity

The Social Construction of the Ocean Philip E. Steinberg, 2001-10-25 This 2001 book presents a history of the uses regulations and representation of the world ocean from approximately 1450 through the present This history is told through a territorial political economy lens borrowing from world systems theory economic geographic studies of the spatiality of capitalism political geographic work on the history of territoriality and post structural work on social conflict in the production of space Just as the modern era has been characterized by a conflicting set of dynamic and contested spatiality on land so has it been characterized by a conflicting set of spatial functions at sea Evidence is marshaled from legal texts literary and artistic creations cartographic representations advertisements commercial and military history and policy debates The book concludes by considering how lessons learned from the history of the ocean may be applied to emerging spaces such as cyberspace where there is a similarly problematic fit between social processes and the institutions of state governance

Listening To The Sea Robert Jay Wilder, 2010-06-15 Environmental politics and policy while gaining a significant place in the nation's consciousness constantly comes up against the United States desire for more development more profit and a collective lack of foresight Nowhere is this more evident than in the crucial biodiversity of the world's oceans which are victim to pollution overharvesting habitat destruction and simplistic and fragmented environmental policies that do not speak to underlying problems Robert Wilder describes how management of the world's oceans and their ecosystems has long faced two principal obstacles The first is the seemingly infinite capacity of human apathy something that permits us to take the sea's comfort sustenance ecological services and integrity for granted The second is the myriad lines for rigid offshore

jurisdiction That people believe the diversity of life on land should be protected is reflected in well publicized efforts to save the celebrated biodiversity of rainforests Far less is known however about protecting a larger two thirds of this planet the oceans Drawing on academic literature and practical experience Wilder illustrates the nature of the questions facing decision makers and provides intelligent well crafted solutions By describing how the emerging idea of precautionary action can help build second generation policy Wilder offers means to halt problematic overfishing He integrates political science with the goals of environmental protection revealing why agencies often fail in their mission to preserve the environment and offers fresh sensible new paths ahead Wilder shows how damage to marine ecosystems often stems from distant land based activities and details emerging ideas such as how industrial ecology can be a cost effective way to prevent pollution Through a rigorous integration of policy and science Wilder suggests a much improved second generation governance of the ocean and coasts and proposes new ideas for resolving the environmental policy stalemate found within the U S government
