Ion Channels in Biophysics and Physiology Lei Zhou, 2022-02-09 This book gathers relatively recent and significant topics in the field of ion channel research. Ion channels form the molecular basis for membrane excitability in cells present in the cardiovascular and nervous systems. In many non excitable cells, ion channels contribute to diverse physiological functions including the secretion of signaling compounds like hormones and insulin, cell volume regulation, intracellular signaling, especially Ca^{2+} signaling etc. Many human diseases have been attributed to abnormal channel functions and defective membrane expression of channel proteins. On the other hand, ion channels are excellent models for studying protein biophysics, especially the allosteric regulation of protein function by miscellaneous stimuli. Therefore, research on ion channels carries significant meaning for the understanding of basic protein biophysics and diverse physiological functions. Such vital information also assists in developing novel and effective treatments for related human diseases. This book provides graduates and scientists in both basic and clinical levels a comprehensive understanding of cutting edge advances and a useful and stimulating platform for tackling their own questions about ion channels. **China : Being a Military Report on the North-eastern Portions of the Provinces of Chih-li and Shan-tung, Nanking and Its Approaches, Canton and Its Approaches** India. Quarter Master General's Department. Intelligence Branch, 1884 Farrow's Military Encyclopedia Edward Samuel Farrow, 1885 **Thermal Biology** Makoto Tominaga, Masahiro Takagi, 2024-09-17 This book concerns two subthemes: temperature sensing and temperature responding systems, addressing the questions of how temperature is sensed and how temperature is related to biological functions respectively. Temperature affects various physiological functions and is one of the most important factors in homeostasis. The book seeks to integrate our understanding of temperature dependent biological phenomena with the development of techniques that detect and regulate local temperatures in cells and organs with high resolution and precision. Part I: Temperature sensing addresses temperature sensing mechanisms by focusing on

plasma membrane molecules intracellular molecules and intracellular metabolic pathways This part seeks to develop ways to detect and regulate local temperatures at a cellular level which would facilitate future temperature sensing research Part II Temperature responding systems focuses on the neural circuits that integrate information concerning ambient temperature sensation the effects of temperature on metabolic functions and biological rhythms and mechanisms involved in emotion formation This part clarifies crosstalk between temperature responding systems by developing methods to detect and regulate local temperatures in organs Authors of this book are leading researchers investigating temperature sensing mechanisms across a wide range of biological responses from molecular to whole organism levels The book promotes an integrated understanding of temperature dependent biological phenomena under a novel discipline thermal biology which leads to a novel concept wherein temperature as a physical quantity could be viewed as an element of new signaling mechanisms
