Extragalactic Astronomy and Cosmology Peter Schneider, 2007-08-16 Starting with the description of our home galaxy the Milky Way this cogently written textbook introduces the reader to the astronomy of galaxies their structure active galactic nuclei evolution and large scale distribution Then from the extensive and thorough introduction to modern observational and theoretical cosmology the text turns to the formation of structures and astronomical objects in the early universe The basics of classical astronomy and stellar astrophysics needed for extragalactic astronomy are given in the appendix In particular Peter Schneider's Extragalactic Astronomy and Cosmology has the goal of imparting the fundamental knowledge of this fascinating subfield of astronomy while leading readers to the forefront of astronomical research But it seeks to accomplish this not only with extensive textual information and insights In addition the author's evident admiration for the workings of the universe that shines through the lines and the many supporting color illustrations will deeply inspire the reader While this book has grown out of introductory university courses on astronomy and astrophysics it will not only be appreciated by undergraduate students and lecturers Through the comprehensive coverage of the field even graduate students and researchers specializing in related fields will appreciate it as reliable reference

**Cosmic Explosions** Edo Berger, 2004 The diversity of stellar death is revealed in the energy velocity and geometry of the explosion debris ejecta Using multi wavelength observations of gamma ray burst GRB afterglows I show that GRBs arising from the death of massive stars are marked by relativistic collimated ejecta jets with a wide range of opening angles These results suggest that various cosmic explosions are powered by a common energy source an engine possibly an accreting stellar mass black hole with their diverse appearances determined solely by the variable high velocity output On the other hand using radio observations I show that local type Ibc core collapse supernovae generally lack relativistic ejecta and are therefore not powered by engines Instead the highest velocity debris in these sources typically with a velocity lower than 100 000 km sec are produced in the effectively spherical ejection of the stellar envelope The relative rates of engine and collapse powered explosions suggest that the former account for only a small fraction of the stellar death rate Using the first radio and submillimeter observations of GRB hosts I show that some are extreme starburst galaxies with the bursts directly associated with the regions of most intense star formation I suggest by comparison to other well studied samples that GRBs preferentially occur in sub luminous low mass galaxies undergoing the early stages of a starburst process If confirmed with future observations this trend will place GRBs in the forefront of star formation and galaxy evolution studies
