Science Under Scarcity Principles And Practice For Agricultural Research Evaluation And Priority Setting:

Science Under Scarcity Julian M. Alston, George W. Norton, Philip G. Pardey, 1998 Resources for agricultural science are scarce across the world Yet even as resources are shrinking agricultural science has expanded its inquiry into many new areas such as environmental preservation food quality and rural development without forsaking its more traditional concerns In a time of tight government budgets research administrators are faced with the need to provide strong evidence that costs are justified by benefits Science under Scarcity is an invaluable guide to the theory and methods necessary for evaluating research in agriculture and for setting priorities for resource allocation Although economists have made significant progress in developing more sophisticated methods for research evaluation and priority setting many research analysts and administrators do not have a working knowledge of those practices Without the assistance of formal economic analysis it is particularly difficult to assess the social value of new technologies or to make informed judgements about the trade offs that are involved in allocation decisions Addressing that knowledge gap this book reviews synthesizes and extends such methods as economic surplus analysis econometric techniques mathematical programming procedures and scoring models It discusses these practices in the context of scientific policy describes their conceptual foundations and explains how to do them Originally published in 1995 in hardcover by Cornell University Press it is now reissued in paperback by CAB INTERNATIONAL

Handbook of Agricultural Economics Robert E. Evenson, Prabhu Pingali, 2009-10-20 Advances in agriculture offer many countries the best and only chance of reducing poverty Yet economic growth and population increases are driving higher demand for food and rising real prices What solutions have successfully promoted agriculture This volume examines national and international food agriculture policies and how they enhance agricultural productivity growth It provides unique historical reviews on policies and their effects and it clearly articulates both positive and negative lessons for promoting agriculture lead growth With chapters written by international authorities this book recognizes that agriculture is not just about providing food for today but about growing it in an environmentally sustainable way that can help people work their ways out of poverty Chapters cover international macro economic policies and trade farm structure in developing countries regional experiences in agriculture and regional studies on agricultural productivity policies

Agricultural Innovation Systems The World Bank, 2012-02-21 Managing the ability of agriculture to meet rising global demand and to respond to the changes and opportunities will require good policy sustained investments and innovation not business as usual Investments in public Research and Development extension education and their links with one another have elicited high returns and pro poor growth but these investments alone will not elicit innovation at the pace or on the scale required by the intensifying and proliferating challenges confronting agriculture Experience indicates that aside from a strong capacity in Research and Development the ability to innovate is often related to collective action coordination the exchange of knowledge among diverse actors the incentives and resources available to form partnerships and develop businesses and

conditions that make it possible for farmers or entrepreneurs to use the innovations While consensus is developing about what is meant by innovation and innovation system no detailed blueprint exists for making agricultural innovation happen at a given time in a given place for a given result The AIS approach that looks at these multiple conditions and relationships that promote innovation in agriculture has however moved from a concept to a sub discipline with principles of analysis and action AIS investments must be specific to the context responding to the stage of development in a particular country and agricultural sector especially the AIS This sourcebook contributes to identifying designing and implementing the investments approaches and complementary interventions that appear most likely to strengthen AIS and to promote agricultural innovation and equitable growth It emphasizes the lessons learned benefits and impacts implementation issues and prospects for replicating or expanding successful practices The information in this sourcebook derives from approaches that have been tested at different scales in different contexts It reflects the experiences and evolving understanding of numerous individuals and organizations concerned with agricultural innovation including the World Bank This information is targeted to the key operational staff in international and regional development agencies and national governments who design and implement lending projects and to the practitioners who design thematic programs and technical assistance packages The sourcebook can also be an important resource for the research community and nongovernmental organizations NGOs

Systems for Sustainability Frank A. Stowell, Ray L. Ison, Rosalind Armson, Jacky Holloway, Sue Jackson, Steve McRobb, 2013-11-11 The term sustainability has entered the lexicon of many academic disciplines and fields of professional practice but to date does not appear to have been seriously considered within the systems community unless perhaps under other guises Within the wider community there is no consensus around what sustainability means with some authors identifying 70 to 100 definitions of the term Some see sustainability as the precise and quantifiable outcomes of biological systems whilst others see it in terms of processes relevant to personal and organizational change with the potential to effect changes in our relationships with our environments Internationally it has been increasingly used in relation to the term sustainable development a term popularised by the Brundtland Commission's report in 1987 entitled Our Common Future Despite this diversity and polarised perception on its utility unlike many other popular terms it has not had its time and subsided quietly from our language It is therefore timely for the systems community to explore the relationship between systems and sustainability in a range of contexts Participants in this the 5th International Conference of the United Kingdom Systems Society UKSS have been invited to reflect critically on the contribution of systems thinking and action to sustainability to the sustainability of personal relationships the organizations in which live and work and our natural environment
