Beyond Technology David Buckingham,2013-04-17 Beyond Technology offers a challenging new analysis of learning young people and digital media Disputing both utopian fantasies about the transformation of education and exaggerated fears about the corruption of childhood innocence it offers a level headed analysis of the impact of these new media on learning drawing on a wide range of critical research Buckingham argues that there is now a growing divide between the media rich world of childrens lives outside school and their experiences of technology in the classroom Bridging this divide he suggests will require more than superficial attempts to import technology into schools or to combine education with digital entertainment While debunking such fantasies of technological change Buckingham also provides a constructive alternative arguing that young people need to be equipped with a new form of digital literacy that is both critical and creative Beyond Technology will be essential reading for all students of the media or education as well as for teachers and other education professionals **Children, Media and Consumption** Karin M. Rethinking Learning: What Counts as Learning and What Learning Counts Judith Green, Allan Luke, 2006-03-15 The rapid transformations of social economic and cultural worlds of learners in school and nonschool settings that we are facing today are reminiscent of the transformations that accompanied the industrial revolution at the turn of the 20th century Like those at the turn of the 20th century education researchers and their constituencies e.g. students teachers community members and policy makers are faced with a series of questions How are we to respond to the educational challenges of this new millennium How do we engage with new forms of learning the influence of new media on children's lives changing community dynamics and many long standing and tenacious educational and social problems And how can research and theory constructively and critically engage with the demands and imperatives of government educational and social policies In this book the editors bring together an intergenerational group of researchers who represent both new and long standing perspectives and debates on the shapes definitions and processes of learning in the context of global cultural and economic change **Psychotherapists on Film, 1899-1999** John Flowers, Paul Frizler, 2004-04-22 How long have psychotherapists been depicted in films Nearly as long as there have been films or psychotherapists for that matter This isn't surprising if one considers that the Freudian revolution in psychology and the invention of motion pictures occurred at about the same time What may be surprising is the sheer number of times that psychotherapists in their many guises have shown up in the movies and how their depiction has reflected changing social attitudes about psychotherapy over the last century This
