Lewis, 1989 Principles of Naval Architecture, 1967 **Ship Motion Control** Tristan Perez, 2006-03-30 engineers into a single volume whilst concentrating on two important research control design problems autopilots with rudder roll stabilization and fin and combined rudder fin stabilization He has been guided by some of the leading marine control academics in particular Mogens Blanke and Thor Fossen indeed Chapters 3 and 4 on kinematics and kinetics of ship motion are jointly authored with Professor Fossen There are some 240 cited references an invaluable resource for interested readers The volume is likely to appeal to a wide range of readers who will each be able to extract something different from the various parts of the monograph Part I has some four chapters on the modelling fundamentals including kinematics dynamics and actuators Part II is a very useful survey of the ship roll stabilization problem and how ship roll performance is measured and assessed This clearly motivates the human necessity for roll reduction and roll stabilization Parts III and IV move on to the control systems aspects of the various stabilization designs Valuable material here includes a study of system performance limitations as caused by the presence of non minimum phase characteristics and actuator saturation Chapter 10 has an interesting historical review of these marine control problems stretching back some thirty years into the 1970s **Handbook of Marine Craft Hydrodynamics and Motion Control** Thor I. Fossen, 2011-05-23 The technology of hydrodynamic modeling and marine craft motion control systems has progressed greatly in recent years This timely survey includes the latest tools for analysis and design of advanced guidance navigation and control systems and presents new material on underwater vehicles and surface vessels Each section presents numerous case studies and applications providing a practical understanding of how model based motion control systems are designed Key features include a three part structure covering Modeling of Marine Craft Guidance Navigation and Control Systems and Appendices providing all the supporting theory in a single resource kinematics kinetics hydrostatics seakeeping and maneuvering theory and simulation models for marine craft and environmental forces guidance systems sensor fusion and integrated navigation systems inertial measurement units Kalman filtering and nonlinear observer design for marine craft state of the art methods for feedback control more advanced methods using nonlinear theory enabling the user to compare linear design techniques before a final implementation is made linear and nonlinear stability theory and numerical methods companion website that hosts links to lecture notes and download information for the Marine Systems Simulator MSS which is an open source Matlab Simulink toolbox for marine systems The MSS toolbox includes hydrodynamic models and motion control systems for ships underwater vehicles and

floating structures With an appropriate balance between mathematical theory and practical applications academic and industrial researchers working in marine and control engineering aspects of manned and unmanned maritime vehicles will benefit from this comprehensive handbook It is also suitable for final year undergraduates and postgraduates lecturers development officers and practitioners in the areas of rigid body modeling hydrodynamics simulation of marine craft control and estimation theory decision support systems and sensor fusion www.wiley.com/go/fossen_marine
