X-Nuclei Magnetic Resonance Imaging Guillaume Madelin, 2022-03-14 Standard magnetic resonance imaging MRI is a prominent clinical imaging modality used to diagnose and study diseases in vivo It is principally based on the detection of

the nuclei of hydrogen atoms the proton symbol ^1H in water molecules in tissues X nuclei MRI also called non proton MRI is based on the detection of the nuclei of other atoms X nuclei in the body such as sodium ^{23}Na phosphorus ^{31}P chlorine ^{35}Cl potassium ^{39}K deuterium ^2H oxygen ^{17}O lithium ^7Li and fluorine ^{19}F using modified software and hardware X nuclei MRI can provide fundamental new metabolic information related to cellular energetic metabolism and ion homeostasis in tissues that cannot be assessed using standard hydrogen MRI This book is an introduction to the techniques and biomedical applications of X nuclei MRI It describes the theoretical and experimental basis of X nuclei MRI the limitations of this technique and its potential biomedical applications for the diagnosis and prognosis of many disorders or for quantitative monitoring of therapies in a wide range of diseases The book is divided into four parts Part I includes a general description of X nuclei nuclear magnetic resonance physics and imaging Part II deals with the MRI of endogenous nuclei such as ^{23}Na ^{31}P ^{35}Cl and ^{39}K Part III the MRI of endogenous exogenous nuclei such as ^2H and ^{17}O and Part IV the MRI of exogenous nuclei such as ^7Li and ^{19}F The book is illustrated throughout with many representative figures and includes references and reading suggestions in each section It is the first book to introduce X nuclei MRI to researchers clinicians students and general readers who are interested in the development of imaging methods for assessing new metabolic information in tissues in vivo in order to diagnose diseases improve prognosis or measure the efficiency of therapies in a timely and quantitative manner It is an ideal starting point for a clinical or scientific research project in non proton MRI techniques

Regularized Image Reconstruction in Parallel MRI with MATLAB Joseph Suresh Paul, Raji Susan Mathew, 2019-11-05 Regularization becomes an integral part of the reconstruction process in accelerated parallel magnetic resonance imaging pMRI due to the need for utilizing the most discriminative information in the form of parsimonious models to generate high quality images with reduced noise and artifacts Apart from providing a detailed overview and implementation details of various pMRI reconstruction methods Regularized image reconstruction in parallel MRI with MATLAB examples interprets regularized image reconstruction in pMRI as a means to effectively control the balance between two specific types of error signals to either improve the accuracy in estimation of missing samples or speed up the estimation process The first type corresponds to the modeling error between acquired and their estimated values The second type arises due to the perturbation of k space values in autocalibration methods or sparse approximation in the compressed sensing based reconstruction model Features Provides details for optimizing regularization parameters in each type of reconstruction Presents comparison of regularization approaches for each type of pMRI reconstruction Includes discussion of case studies using clinically acquired data MATLAB codes are provided for each reconstruction type Contains method wise description of adapting regularization to optimize speed and accuracy This book serves as a reference material for researchers and students involved in development of pMRI reconstruction methods Industry practitioners concerned with how to apply regularization in pMRI reconstruction will find this book most useful
