Simulating Hamiltonian Dynamics:

Simulating Hamiltonian Dynamics Benedict Leimkuhler, Sebastian Reich, 2004 Geometric integrators are time stepping methods designed such that they exactly satisfy conservation laws symmetries or symplectic properties of a system of differential equations In this book the authors outline the principles of geometric integration and demonstrate how they can be applied to provide efficient numerical methods for simulating conservative models Beginning from basic principles and continuing with discussions regarding the advantageous properties of such schemes the book introduces methods for the N body problem systems with holonomic constraints and rigid bodies More advanced topics treated include high order and variable stepsize methods schemes for treating problems involving multiple time scales and applications to molecular dynamics and partial differential equations The emphasis is on providing a unified theoretical framework as well as a practical guide for users The inclusion of examples background material and exercises enhance the usefulness of the book for self instruction or as a text for a graduate course on the subject

Dynamics Thomas P. Weissert, 2012-12-06 We hear a lot about dynamical systems theory these days chaos dynamics is the popular idiom but very little of this abstract discipline is taught in undergraduate or even in graduate school unless that happens to be one's own field People may have heard some of the terms but they may not understand what a dynamicist does Just what does a dynamicist do Although I've been through the training I spend much more time talking and thinking about dynamics than actually doing it which is a circumstance that affords me an interesting perspective Some time after defending my dissertation when I stopped back by my alma mater on a visit through Boulder I ran into one of my advisors a practicing dynamicist and he was excited to show me his new workstation and its resident software Hope fully by relating what I experienced then I may in part help to answer my opening question He sat down in front of a very large screen at least 19 inches across so closely that it filled his field of view completely At his fingertips were the usual mouse and keyboard He fired up the software and chose a model I think we were out to explore just the standard map As the program began the screen remained black except for a small blinking cursor at the middle

Quantum Information Processing Gerd Leuchs, 2003-04-09 The possible realization of quantum computers within the next two decades could cause a revolution in data processing and cryptography Here leading experts in the field of quantum information technology summarize recent developments by way of a cross disciplinary link between different technical and theoretical approaches
