## **Simulating Oil Entrapment In Clastic Sequences Computer Methods In The Geosciences:**

*Simulating Oil Entrapment in Clastic Sequences* J. Wendebourg, J.W. Harbaugh, 1997-11-10 The book introduces procedures for simulating migration and entrapment of oil in three dimensions in sequences of sandstones and shales A principal purpose is to show how simulation experiments can represent oil migration routes and predict places where oil may be trapped in sandstones and intercalated shales The book derives the differential equations used to represent three dimensional motions of porewater and oil in sedimentary sequences and shows how the equations may be transformed into finite form for numerical solution with computers There is emphasis on the graphic display of solutions and results of example theoretical and actual applications are presented The book is directed to geologists who have backgrounds in mathematics and computing and who are engaged in oil exploration and production *Geoscience After IT* T.V. Loudon, 2000-12-19 Most geoscientists are aware of recent IT developments but cannot spend time on obscure technicalities Few have considered their implications for the science as a whole Yet the information industry is moving fast electronic delivery of hyperlinked multimedia standards to support interdisciplinary and geographic integration new models to represent and visualize our concepts and control and manage our activities plummeting costs that force the pace To stay on course the scientist needs a broad appreciation of the complex and profound interactions of geoscience and IT not previously reviewed in a single work The book brings together ideas from many sources some probably unfamiliar that bear on the geoscience information system It encourages readers to give thought to areas that for various reasons they have taken for granted and to take a view on forces affecting geoscience the consequences for themselves and their organisations and the need to reconsider adapt and rebuild Practicing geoscientists with a general interest in how IT will affect their work and influence future directions of the science geoscientists familiar with IT applications in their own specialist field who need a broader perspective and students or educators specializing in IT applications in geoscience who require a top down overview of their subject will find this title valuable The IT background from this book should help geoscientists build a strategy for the new century Geologic Modeling and Simulation Daniel F. Merriam, John C. Davis, 2012-12-06 Modeling and simulation were introduced to the earth sciences about four decades ago Modeling has proven its worth and now it is an accepted procedure for analyzing and solving geological problems The papers in this collection are focused on modeling sediment deposition and sedimentary sequences and have a decidedly practical flavor Some of the leading simulation packages such as CORRELATOR SEDFLUX SEDpak SEDSIM STRATA and STRATSIM are applied to problems in hydrocarbon exploration oil production groundwater development coal bed appraisal geothermics and environmental diagnosis All of these subjects fall under the broad heading of sedimentary basin analysis The fifteen papers in this volume are written by internationally recognized experts from academia and industry The contributions represent the status of geologic modeling and simulation at the start of the 21st century and will give the reader an insight into current research problems and their possible solutions

technical groups the researchers at the Institute for Petroleum and Organic Geochemistry Forschungszentrum Jilich KFA

spent so much time at KFA as a guest scientist and researcher that it is most appropriate for him to contribute to the book  
During its more than 20 year history the KFA group has made numerous and significant contributions to the understanding of  
petroleum evolution The KFA researchers have emphasized both the field and laboratory approaches to such important  
problems as source rock recognition and evaluation oil and gas generation maturation of organic matter expulsion and  
migration of hydrocarbons and crude oil composition and alteration IES Jilich has been a leader in the development and  
application of numerical simulation basin modeling procedures The cooperation between the two groups has resulted in a  
very fruitful synergy effect both in the development of modeling software and in its application The purpose of the present
