Privacy in Statistical Databases Josep Domingo-Ferrer, Vicenc Torra, 2004-06-30 Privacy in statistical databases is about finding a trade-off to the tension between the increasing societal and economical demand for accurate information and the legal and ethical obligation to

protect the privacy of individuals and enterprises which are the source of the statistical data. Statistical agencies cannot expect to collect accurate information from individual or corporate respondents unless these feel the privacy of their responses is guaranteed. Also, recent surveys of Web users show that a majority of these are unwilling to provide data to a Web site unless they know that privacy protection measures are in place.

Privacy in Statistical Databases 2004 PSD2004 was the national conference of the CASC project Computational Aspects of Statistical Confidentiality IST 2000 25069. PSD2004 is in the style of the following conferences: Statistical Data Protection held in Lisbon in 1998 and with proceedings published by the Office of Official Publications of the EC and also the AMRADS project SDC Workshop held in Luxemburg in 2001 and with proceedings published by Springer Verlag as LNCS Vol 2316. The Program Committee accepted 29 papers out of 44 submissions from 15 different countries on four continents. Each submitted paper received at least two reviews. These proceedings contain the revised versions of the accepted papers. These papers cover the foundations and methods of tabular data protection, masking methods for the protection of individual data, microdata, synthetic data, generation, disclosure, risk analysis and software case studies.

Privacy in Statistical Databases Josep Domingo-Ferrer, Emmanouil Magkos, 2010-09-14. Privacy in statistical databases is a discipline whose purpose is to provide so that the tension between the social, political, economic and corporate demand for accurate information and the legal and ethical obligation to protect the privacy of the various parties involved. Those parties are the respondents, the individuals and enterprises to which the database records refer, the data owners, those organizations spending money in data collection and the users, the ones querying the database or the search engine who would like their queries to stay confidential. Beyond law and ethics, there are also practical reasons for data collecting agencies and corporations to invest in respondent privacy: if individual respondents feel their privacy guaranteed, they are likely to provide more accurate responses. Data owner privacy is primarily motivated by practical considerations: if an enterprise collects data at its own expense, it may wish to minimize leakage of those data to other enterprises, even to those with whom joint data exploitation is planned. Finally, user privacy results in increased user

satisfaction even if it may curtail the ability of the database owner to provide users

There are at least two traditions in statistical database privacy both of which started in the 1970s the first one stems from official statistics where the discipline is also known as statistical disclosure control SDC and the second one originates from computer science and database technology In official statistics the basic concern is respondent privacy In computer science the initial motivation was also respondent privacy but from 2000 onwards growing attention has been devoted to owner privacy privacy preserving data mining and user privacy private information retrieval
