Managing Organic Matter in Tropical Soils: Scope and Limitations Christopher Martius, Holm Tiessen, Paul L.G. Vlek, 2013-11-11 Soil organic matter is a reservoir for plant nutrients provides water holding capacity stabilizes soil structure against compaction and erosion and thus determines soil productivity All agriculture to some degree depends on soil organic matter It has long been known that soil organic matter declines when land is taken into cultivation and that the productivity of new agricultural land is governed by fertility contributions from decomposing natural organic matter The expansion of agriculture to ever new and more fragile lands particularly in tropical and developing regions causes environmental degradation with local effects on soil quality regional effects on landscape integrity and water quality and global effects on carbon cycles and the atmosphere This book summarizes current knowledge of the properties and dynamics of soil organic matter in the tropics its role in determining soil quality its stability and turnover and the options for management in the context of tropical land use systems for a readership of resource scientists economists and advanced students Maintenance of organic matter is critical for preventing land degradation Case studies and practical applications are therefore an important part of the book as are the exploration of future directions in research and management

Potato Ecology And modelling of crops under conditions limiting growth A.J. Haverkort, D.K.L.

MacKerron, 2012-12-06 Potato is the fourth major staple food in the world and is still rapidly gaining importance especially in the tropics In May 1994 the second international potato modelling conference was held in Wageningen the Netherlands as a summerschool of the C T de Wit Graduate School The conference was sponsored by DLO SCRI SSCR W AU and the LEB Fund Over 80 scientists participated coming from 16 countries Of each crop physiological and modelling subject a leading scientist was requested to write a review of the most recent developments in his or her field The reviews with highlights from the authors own work are such that the physiological work described is of interest to the modeller and the modelling work to the crop physiologist Applications of the quantitative approach are also reviewed in the concluding chapters that deal with decision support systems breeding and agro ecological zoning An outstanding point of this book is that both the crop ecology and the modelling of a broad range of biotic and abiotic factors are treated by scientists representing groups which are specialized in the subject The two related disciplines met during the conference and thus wrote the chapters with each other s interest in mind The book highlights the limitations for potato growth and development from the viewpoints of both the crop physiologist and the crop systems analyst
