Precambrian Cambrian Boundary:

The Precambrian-Cambrian Boundary John Watson Cowie, M. D. Brasier, 1989 Events across the Precambrian Cambrian boundary brought about the most dramatic geological change in Earth's history the appearance of invertebrates including animals with hard parts that began the Phanerozoic fossil record This book provides an up to date review of the Precambrian Cambrian boundary problem as seen by a group of experts active in this controversial area of research For more than a decade international groups have been unearthing new information about the sequence of events during this period centered around the question of where to fix the actual boundary point Using a chronological framework the book gathers together information essential to the understanding of the evolutionary extinctions and events that brought the Precambrian period to an end

Brasier, D. McIlroy, N. McLoughlin, 2017-06-09 This volume in memory of Professor Martin Brasier which has many of his unfinished works summarizes recent progress in some of the hottest topics in palaeobiology including cellular preservation of early microbial life and early evolution of macroscopic animal life encompassing the Ediacara biota The papers focus on how to decipher evidence for early life which requires exceptional preservation employment of state of the art techniques and also an understanding gleaned from Phanerozoic lagersttte and modern analogues The papers also apply Martin's MOFAOTYOF principle my oldest fossils are older than your oldest fossils requiring an integrated approach to understanding fossils The adoption of the null hypothesis that all putative traces of life are abiotic until proven otherwise and the consideration of putative fossils within their spatial context characterized the work of Martin Brasier as is well demonstrated by the papers in this volume *Symposium on the Precambrian-Cambrian Boundary*, 1978 **The Precambrian-Cambrian Boundary**, 1982 **Precambrian-Cambrian boundary global stratotype ratified and a new perspective of Cambrian time** E. P. Crimes, 1985 Trace fossils from the upper part of the Stelkuz formation 609m and from the overlying Boya Formation 400.5 m permit tentative definition of the Precambrian Cambrian boundary in the Cassiar Mountains The strata investigated are below the top of the Lower Cambrian Fallotaspis Zone a level located 1.5 m above the upper contact of the Boya Formation The Precambrian

Cambrian boundary is tentatively placed 592 m below this level at a disconformity within the Stelkuz Formation. Correlations with other boundary strata in the Canadian Cordillera suggest the optimum area for further testing.
