Precis Of Mathematical Logic:

A Precis of Mathematical Logic J.M. Bochenski, 2013-04-18 The work of which this is an English translation appeared originally in French as *Precis de logique mathématique* In 1954 Dr Albert Menne brought out a revised and somewhat enlarged edition in German *Grundriss der Logik* F Schöningh Paderborn In making my translation I have used both editions For the most part I have followed the original French edition since I thought there was some advantage in keeping the work as short as possible However I have included the more extensive historical notes of Dr Menne his bibliography and the two sections on modal logic and the syntactical categories 25 and 27 which were not in the original I have endeavored to correct the typographical errors that appeared in the original editions and have made a few additions to the bibliography In making the translation I have profited more than words can tell from the ever generous help of Fr Bochenski while he was teaching at the University of Notre Dame during 1955-56 OTTO BIRD Notre Dame 1959 I GENERAL PRINCIPLES OF INTRODUCTION 0 1 Notion and history Mathematical logic also called logistic symbolic logic the algebra of logic and more recently simply formal logic is the set of logical theories elaborated in the course of the last century with the aid of an artificial notation and a rigorously deductive method A Precis of Mathematical Logic Joseph M 1902-

Mathematical Logic Wolfgang Rautenberg, 1987-06-16 Gert H Muller The growth of the number of publications in almost all scientific areas as in the area of mathematical logic is taken as a sign of our scientifically minded culture but it also has a terrifying aspect In addition given the rapidly growing sophistication specialization and hence subdivision of logic researchers students and teachers may have a hard time getting an overview of the existing literature particularly if they do not have an extensive library available in their neighbourhood they simply do not even know what to ask for More specifically if someone vaguely knows that something vaguely connected with his interests exists somewhere in the literature he may not be able to find it even by searching through the publications scattered in the review journals Answering this challenge was and is the central motivation for compiling this Bibliography The Bibliography comprises presently the following six volumes listed with the corresponding Editors I Classical Logic W Rautenberg II Non classical Logics W Rautenberg III Model Theory H D Ebbinghaus IV Recursion Theory P G Hinman V Set Theory A R Blass VI Proof Theory Constructive Mathematics J E Kister D van Dalen A S Troelstra

Course of Mathematical Logic R. Fraïssé, 1973 This book is addressed primarily to researchers specializing in mathematical logic It may also be of interest to students completing a Masters Degree in mathematics and desiring to embark on research in logic as well as to teachers at universities and high schools mathematicians in general or philosophers wishing to gain a more rigorous conception of deductive reasoning The material stems from lectures read from 1962 to 1968 at the Faculté des Sciences de Paris and since 1969 at the Universities of Provence and Paris VI The only prerequisites demanded of the reader are elementary combinatorial theory and set theory We lay emphasis on the semantic aspect of logic rather than on syntax in other words we are concerned with the connection between formulas and the multirelations or models which satisfy them In this context considerable importance attaches to the theory of relations which yields a novel approach and algebraization of many concepts of logic The present two volume edition considerably widens the scope of the original French one volume edition 1967 *Relation Formule logique* Compacité Complétude The new Volume 1 1971 *Relation et Formule logique* reproduces the old Chapters 1 2 3 4 5 and 8 redivided as follows Word formula Chapter 1 Connection Chapter 2 Relation operator Chapter 3 Free formula Chapter 4 Logical formula denumerable model theorem Löwenheim Skolem Chapter 5 Completeness theorem Gödel Herbrand and Interpolation theorem Craig Lyndon Chapter 6 Interpretability of relations Chapter 7
