*Ancient Europe* Stuart Piggott, *Prehistoric Farming in Europe* Graeme Barker, 1985-07-11 Drawing upon his own extensive knowledge of European archaeology Graeme Barker has impressively integrated the full range of archaeological data to produce in this book a masterly account of prehistoric farming in Europe on a unique scale He makes use of modern archaeological techniques to reconstruct the lives of prehistoric farmers in remarkable detail Not only do we now have a vivid picture of the prehistoric farmyard but we know what animals were kept how they were fed and why they were bred Evidence for crops grown and techniques of cultivation and husbandry helps recreate the prehistoric landscape Even the social organisation that determined the use of resources and provided the crucial stimulus for agricultural change can be relived Graeme Barker develops his argument through analogies with the agricultural history of classical and medieval Europe and concludes that today s industrial farmers can learn much from the successes and failures of early European farming

*European Archaeology as Anthropology* Pam J. Crabtree, Peter Bogucki, 2017-03-21 Since the days of V Gordon Childe the study of the emergence of complex societies has been a central question in anthropological archaeology However archaeologists working in the Americanist tradition have drawn most of their models for the emergence of social complexity from research in the Middle East and Latin America Bernard Wailes was a strong advocate for the importance of later prehistoric and early medieval Europe as an alternative model of sociopolitical evolution and trained generations of American archaeologists now active in European research from the Neolithic to the Middle Ages Two centuries of excavation and research in Europe have produced one of the richest bodies of archaeological data anywhere in the world The abundant data show that technological innovations such as metallurgy appeared very early but urbanism and state formation are comparatively late developments Key transformative process such as the spread of agriculture did not happen uniformly but rather at different rates in different regions The essays in this volume celebrate the legacy of Bernard Wailes by highlighting the contribution of the European archaeological record to our understanding of the emergence of social complexity They provide case studies in how ancient Europe can inform anthropological archaeology Not only do they illuminate key research topics they also invite archaeologists working in other parts of the world to consider comparisons to ancient Europe as they construct models for cultural development for their regions Although there is a substantial corpus of literature on European prehistoric and medieval archaeology we do not know of a comparable volume that explicitly focuses on the contribution that the study of ancient Europe can make to anthropological archaeology

P. Nieuwenhuyse, 2016-11-23 Rich case studies examining responses to climatic events in ancient Europe and the Near East The subject of climate change could hardly be more timely In *Climate and Cultural Change in Prehistoric Europe and the Near East* an interdisciplinary group of contributors examine climate change through the lens of new archaeological and paleo environmental data over the course of more than 10 000 years from the Near East to Europe Key climatic and other events are contextualized with cultural changes and transitions for which the authors discuss when how and if changes in climate and environment caused people to adapt move or perish More than this publication of crucial archaeological and paleo environmental data however the volume seeks to understand the social political and economic significance of climate change as it was manifested in various ways around the Old World Contrary to perceptions of threatening global warming in our popular media and in contrast to grim images of collapse presented in some archaeological discussions of past climate change this book rejects outright societal collapse as a likely outcome Yet this does not keep the authors from considering climate change as a potential factor in explaining culture change by adopting a critical stance with regard to the long standing practice of equating synchronicity with causality and explicitly considering alternative explanations **Prehistoric Europe** Barry W. Cunliffe, 1998 This book provides a comprehensive account of prehistoric Europe from the coming of the Stone Age man to the fall of the Roman Empire It is a history of both man and the environment looking at the changing landscape of Europe and the ways man has responded and adapted to these changes **Prehistoric Europe** Timothy Champion, 2016-06-16 The study of European prehistory has been revolutionized in recent years by the rapid growth rate of archeological discovery advances in dating methods and the application of scientific techniques to archaeological material and new archaeological aims and frameworks of interpretation Whereas previous work concentrated on the recovery and description of material remains the main focus is now on the reconstruction of prehistoric societies and the explanation of their development This volume provides that elementary and comprehensive synthesis of the new discoveries and the new interpretations of European prehistory After an introductory chapter on the geographical setting and the development of prehistoric studies in Europe the text is divided chronologically into nine chapters Each one describes with numerous maps plans and drawings the relevant archaeological data and proceeds to a discussion of the societies they represent Particular attention is paid to the major themes of recent prehistoric research especially subsistence economy trade settlement technology and social organization **Our Earth and Its Story** Robert Brown, 1890 Place and Space in the Medieval World Meg Boulton, Jane Hawkes, Heidi Stoner, 2017-12-06 This book addresses the critical terminologies of place and space and their role within medieval studies in a considered and critical manner presenting a scholarly introduction written by the editors alongside thematic case studies that address a wide range of visual and textual material The chapters consider the extant visual and textual sources from the medieval period alongside contemporary scholarly discussions to examine place and space in their wider critical context and are written by specialists in a range of disciplines including art history
