Science And Technology In Chinese Civilization:

Science and Technology in Chinese Civilization Cheng-Yih Chen, Roger Cliff, 1987-01-01 **Science and Civilisation in China: Volume 2, History of Scientific Thought** Joseph Needham, Ling Wang, 1956-01-03

The second volume of Dr Joseph Needham's great work *Science and Civilisation in China* is devoted to the history of scientific thought. Beginning with ancient times it describes the Confucian milieu in which arose the organic naturalism of the great Taoist school, the scientific philosophy of the Mohists and Logicians and the quantitative materialism of the Legalists. Thus we are brought on to the fundamental ideas which dominated scientific thinking in the Chinese middle ages. The author opens his discussion by considering the remote and pictographic origins of words fundamental in scientific discourse and then sets forth the influential doctrines of the Two Forces and the Five Elements. Subsequently he writes of the important sceptical tradition, the effects of Buddhist thought and the Neo Confucian climax of Chinese naturalism. Last comes a discussion of the conception of Laws of Nature in China and the West.

The History of Science and Technology in Qin and Han Dynasty Li Shi, The book is the volume of *The History of Science and Technology in Qin and Han Dynasty* among a series of books of *Deep into China Histories*. The earliest known written records of the history of China date from as early as 1250 BC from the Shang dynasty c 1600-1046 BC and the *Bamboo Annals* 296 BC describe a Xia dynasty c 2070-1600 BC before the Shang but no writing is known from the period. The Shang ruled in the Yellow River valley which is commonly held to be the cradle of Chinese civilization. However Neolithic civilizations originated at various cultural centers along both the Yellow River and Yangtze River. These Yellow River and Yangtze civilizations arose millennia before the Shang. With thousands of years of continuous history, China is one of the world's oldest civilizations and is regarded as one of the cradles of civilization. The Zhou dynasty 1046-256 BC supplanted the Shang and introduced the concept of the Mandate of Heaven to justify their rule. The central Zhou government began to weaken due to external and internal pressures in the 8th century BC and the country eventually splintered into smaller states during the Spring and Autumn period. These states became independent and warred with one another in the following Warring States period. Much of traditional Chinese culture, literature and philosophy first developed during those troubled times. In 221 BC Qin Shi Huang conquered the various warring states and created for himself the title of Huangdi or emperor of the Qin, marking the beginning of imperial China. However the oppressive government fell soon after his death and was supplanted by the longer-lived Han dynasty 206 BC-220 AD. Successive dynasties developed bureaucratic systems that enabled the emperor to control vast territories directly. In the 21 centuries from 206 BC until AD 1912, routine administrative tasks were handled by a special elite of scholar-officials. Young men well versed in calligraphy, history, literature and philosophy were carefully selected through difficult government examinations. China's last dynasty was the Qing 1644-1912, which was replaced by the Republic of China in 1912 and in the mainland by the People's Republic of China in 1949. Chinese history has alternated between periods of political unity and peace and

periods of war and failed statehood the most recent being the Chinese Civil War 1927-1949. China was occasionally dominated by steppe peoples most of whom were eventually assimilated into the Han Chinese culture and population. Between eras of multiple kingdoms and warlordism, Chinese dynasties have ruled parts or all of China; in some eras control stretched as far as Xinjiang and Tibet, as at present. Traditional culture and influences from other parts of Asia and the Western world, carried by waves of immigration, cultural assimilation, expansion and foreign contact, form the basis of the modern culture of China.

Technological Development, Society And State: Western And Chinese Civilizations In Comparison - Proceedings Of The Joint Conference Welf Heinrich Schnell, Wolfgang Radtke, Hans Poser, W. König, 1991-10-16
This is a collection of essays focused on problems concerning the philosophy of technology, the concept of nature, the relationships between policy and economic development on the one hand and technological development on the other hand, with respect to philosophical principles, historical and cultural background, both in Western and Chinese civilization.

Science and Civilisation in China, Part 6, Medicine
Joseph Needham, 2000-04-13
The latest volume in Joseph Needham's magisterial review of China's premodern scientific and technological traditions introduces the history of medicine. Following the deaths of Joseph Needham and Lu Gwei-Djen, a considerable amount of written material on the development of Chinese medicine awaited publication. This material has been gathered together by the editor Nathan Sivin in the five essays contained in this volume. They offer a broad and readable account of medicine in culture, including hygiene and preventive medicine, forensic medicine and immunology, and the examinations taken by some Chinese physicians for more than a thousand years. Professor Sivin has edited the essays, expanding them where appropriate and incorporating the results of recent research. His extensive introduction discusses the contributions of Needham and Lu, placing the essays in context and surveys recent scholarship from China, Japan, Europe and the United States.

A Brief History of Image Science and Technology in China
Congyao Han, 2021-06-26
This book, within the vision of the study on the image history, clearly manifests the development of Chinese image science and technology of over 2000 years based on a compendium, while having briefly sorted out expositions by scientists since ancient times. In China, it demonstrates the spiritual course, ideas of thinking and forms of life, and reveals profound humane ideas, basis of sentiments and styles of the spirit featured by Chinese image culture. The historic outline of images is clear-cut, along with authenticated inter-attestation for clues of images and texts.

Historic facts concerning images are ecologically diversified while historic documents about images are properly chosen in addition to the integration between liberal arts and science and perfect combination between images and texts Blessed with nice integration between images and texts this book serves as reference to experts scholars undergraduates and postgraduates related to the study on image history history of science and technology study of history and news communication

Science and Civilisation in China, Part 2, Mechanical Engineering Joseph Needham, 1965-01-02 As Dr Needham s immense undertaking gathers momentum it has been found necessary to subdivide volumes into parts each to be bound and published separately The first part of Volume 4 already published deals with the physical sciences the second with the diverse applications of physics in the many branches of mechanical engineering and the third will deal with civil and hydraulic engineering and nautical technology With this part of Volume 4 then we come to the application by the Chinese of physical principles in the control of forces and in the use of power we cross the frontier

separating tools from the machine We have already noticed that the ancient Chinese concept of *chhi* somewhat similar to the *pneuma* of the Greeks asserted itself prominently in acoustics but we discover here that the Chinese tendency to think pneumatically was also responsible for a whole range of brilliant technological achievements for example the double acting piston bellows the rotary winnowing fan and the water powered metallurgical blowing machine ancestor of the steam engine as well as for some extraordinary insights and predictions in aeronautics

Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures Helaine Selin, 2013-11-11 The Encyclopaedia fills a gap in both the history of science and in cultural studies Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a translator of Greek scientific works The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures science Our aim is not to claim the superiority of other cultures but to engage in a mutual exchange of ideas The Western academic divisions of science technology and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected This work contributes to redressing the balance in the number of reference works devoted to the study of Western science and encourages awareness of cultural diversity The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does xi
