Science In Traditional China:

Science in Traditional China Joseph Needham, 1981 The world's preeminent authority on Chinese science explores the philosophy social structure arts crafts and even military strategies that form our understanding of Chinese science making instructive comparisons along the way to similar elements of Indian Hellenistic and Arabic cultures A major portion of the book concentrates on Taoist alchemy that led not only to the invention of gunpowder and firearms but also through the search for macrobiotic life elixirs to the rise of modern medical chemistry

Science in Traditional China Joseph Needham, 1993 **Traditional Chinese Medicine** James D Adams, Eric J Lien, 2015-10-20 Traditional Chinese medicine has a strong scientific basis but the science of these important preparations is often rarely discussed Western approaches often simplify traditional Chinese medicine to drug discovery in Chinese plants however the majority of traditional Chinese medications use complex mixtures of plant extracts rather than single purified drugs The combination of different extracts is based on yin yang and chi theories which are often poorly understood in the West Yin and yang are known to be the balance of agonists and antagonists whereas chi derives from signalling processes in the body and regulates bodily functions Traditional Chinese medical practitioners understand that yin yang and chi constantly interact in the body to maintain health Western medical practitioners understand how to use agonists and antagonists and how to modify signalling processes but generally do not accept the use of complex plant extracts to perform these functions Aimed at medical scientists and including detailed explanations of the theories behind the science this text may help researchers to understand Chinese medical practitioners and to communicate more effectively with them It will also lead to greater acceptance of traditional medications in the West Presenting a clear rationale for the use of traditional Chinese medications in Western medical facilities it enables scientists to find new directions in experimental design and encourage examination of these useful but often poorly understood preparations in clinical trials

Lenses: A Chinese Study on the Nature of Science Hongming Ma, 2012-09-15 Are the images of science held by learners the same across cultures What are the implications for science education This book explores the nature of science from a cultural perspective Located in the Chinese cultural context the book examines the nexus between characteristics of Chinese thinking and the understanding of the nature of science in Chinese traditional culture The dramatic cultural change as a result of the introduction of Western culture was accompanied by the dramatic reconstruction of the image of science The Chinese science education echoes the understanding of the nature of science in each cultural historical period Reflecting the tension and dilemmas of understanding the nature of science at the policy making level the images of science held by Chinese science teachers represent a mixture of influences by values and beliefs that are embedded in the imported science and by Chinese native cultural beliefs The book concludes with suggestions of change of practice in science education for a more realistic image of science not only within the field of education but also in society at large *Epistemological Issues in Classical Chinese Philosophy* Hans Lenk, Gregor Paul, 1993-01-01 This book shows that classic Chinese philosophy is as rational as Western approaches dealing with the problems of logic epistemology language analysis and linguistic topics from a philosophical point of view It presents detailed analyses of rational and methodological features in Confucianism Taoist philosophy and the School of Names as well as Mohist approaches in classical Chinese philosophy especially in regard to ideas of valid knowledge The authors also provide new arguments against cultural relativism and antirational movements like religious fundamentalism that do not pay due attention to what all human beings have in common to cultural universals

China pearls Joseph Needham, *Questioning Science in East Asian Contexts* Yung Sik Kim, 2014-01-16 Questioning Science in East Asian Contexts brings together twelve essays written by Yung Sik Kim addressing various questions about the social and cultural contexts of science in East Asia Most of the essays deal with the relationship between science and Confucianism especially the roles that Confucian thought values and institutions have on the development of science Kim shows that this relationship is very complex and multifaceted and cannot be dealt with in a simplistic manner Kim offers comparative perspectives and discusses the problems of intercultural comparisons he demonstrates that in spite of the potential dangers that accompany these comparisons they should be made nonetheless as they allow for a better understanding of the situation in East Asia **Science and Civilisation in China, Part 6, Medicine** Joseph

Needham, 2000-04-13 The latest volume in Joseph Needham's magisterial review of China's premodern scientific and technological traditions introduces the history of medicine Following the deaths of Joseph Needham and Lu Gwei Djen a considerable amount of written material on the development of Chinese medicine awaited publication This material has been gathered together by the editor Nathan Sivin in the five essays contained in this volume They offer a broad and readable

account of medicine in culture including hygiene and preventive medicine forensic medicine and immunology and the examinations taken by some Chinese physicians for more than a thousand years Professor Sivin has edited the essays expanding them where appropriate and incorporating the results of recent research His extensive introduction discusses the contributions of Needham and Lu placing the essays in context and surveys recent scholarship from China Japan Europe and the United States Joseph Needham's Contribution to the History of Science and Technology in China Gregory Blue,1981

A Cultural History of Modern Science in China Benjamin A. Elman,2009-07-01 In A Cultural History of Modern Science in China Elman has retold the story of the Jesuit impact on late imperial China circa 1600 1800 and the Protestant era in early modern China from the 1840s to 1900 in a concise and accessible form ideal for the classroom **Several Worlds:**

Elman,2005-04-30 In *On Their Own Terms* Benjamin A Elman

offers a much needed synthesis of early Chinese science during the Jesuit period 1600 1800 and the modern sciences as they evolved in China under Protestant influence 1840s 1900 By 1600 Europe was ahead of Asia in producing basic machines such as clocks levers and pulleys that would be necessary for the mechanization of agriculture and industry In the seventeenth and eighteenth centuries Elman shows Europeans still sought from the Chinese their secrets of producing silk fine textiles

and porcelain as well as large scale tea cultivation Chinese literati borrowed in turn new algebraic notations of Hindu Arabic origin Tychonic cosmology Euclidian geometry and various computational advances Since the middle of the nineteenth century imperial reformers early Republicans Guomindang party cadres and Chinese Communists have all prioritized science and technology In this book Elman gives a nuanced account of the ways in which native Chinese science evolved over four centuries under the influence of both Jesuit and Protestant missionaries In the end he argues the Chinese produced modern science on their own terms *Translations on People's Republic of China* ,1979 **Concepts Of Chinese Science And**

Traditional Healing Arts : A Historical Review Peng Yoke Ho,Frederick Peter Lisowski,1993-09-30 This brief discourse is an introduction to the historical development of medicine in China whose influence on Korea Japan and Southeast Asia was profound and even reached far west into the Islamic world The authors wish to make the interested reader aware of China s rich contribution to the world growth of the medical sciences Too often the view has been taken that the history of medicine began with the discoveries of the Greeks and those ancient nations from whom they learnt The authors want to redress this view and acquaint readers with a glimpse of the concepts and history of Chinese medicine and hope that they will feel encouraged to delve deeper **History and Development of Traditional Chinese Medicine** Zhen'guo Wang,Ping

Chen,Peiping Xie,1999 **Chinese Science; Explorations of an Ancient Tradition** Shigeru Nakayama,Nathan Sivin,1973 Some readers will be drawn to this survey of traditional Chinese science by the idea that humanity has evolved more than one tradition of natural science that deserves to be taken seriously as a study in itself Others will wish to explore the possibility that by reconstructing and imaginatively adopting the viewpoint of so different a culture they might become more critical in judging what aspects of the West s Scientific Revolution grew out of local pressures and prejudices rather than out of the inner necessities of science itself The volume falls naturally into two complementary parts The first provides the reader with perspectives on the work of Joseph Needham whose monumental multi volume *Science and Civilisation in China* is so largely responsible for the growing awareness on the part of inquiring people everywhere that the Chinese technical traditions reached a high level and that the birth of modern science and technology owes a great deal to them Needham s work has often been cited as the greatest one man historical compilation of the twentieth century Needham himself has contributed an opening Meditation to *Chinese Science* in which he recapitulates the motive forces and ideals behind his life s work of which the historical study of Chinese science is only one aspect Derek J de Solla Price then provides biographical material on Needham and gives an account of the genesis and evolution of his magnum opus Needham s central concern with the effect of social and economic factors on the rate of scientific and technological change is examined by A C Graham Shigeru Nakayama demonstrates through a study of all of Needham s publications the presence of a connected philosophy of history and of science that Needham evolved as a young biochemist concerned with the organization and development of life The more numerous essays in the second part of the book extend Needham s work of mapping out the areas of Chinese

science venturing into provinces hitherto terra incognita The contributors cover the Chinese world view astronomy optics pharmacology and medicine In particular they discuss the Chinese concept of nature in an essay written by Mitukuni Yosida the development and limiting factors on the development of Chinese astronomy Kiyosi Yabuuti the Mohist optics of ca 300 B C A C Graham and N Sivin the use of elixir plants as described in the pharmaceutical manual of the adept Lu Ch un yang Ho Peng Yoke Beda Lim and Francis Morsingh Man as a Medicine the traditional therapy using drugs derived from the human body William C Cooper and N Sivin and the early history of anesthesia in China and Japan Saburo Miyasita The book closes with a critical bibliography citing books and articles in Western languages N Sivin The book is the second in The MIT East Asian Science Series
