Science And Ethics:

Ethical Judgment Abraham Edel, 1964 In *Ethical Judgment* Abraham Edel makes clear the part played by biological and social scientific information in ethical judgment and moral action using psychological anthropological and economic materials as well as historical studies Edel suggests that many controversies in ethical theory have emerged because different ethical theories made different scientific assumptions In the almost forty years since his book was first published life has become more complex and technological change has accelerated bringing changes to our morality and ethical theory as well as our conduct If anything his observations are even more pertinent compelling us to examine the empirical core of ethical statements Edel maintains that since our knowledge of social life and history is constantly growing moral theories and ethical judgments ought to embody the best knowledge available at any point in time However because all knowledge and belief is only probable there is never absolute certainty but only what Edel calls residual indeterminacy in human life and knowledge due to complexity and change Edel lists four factors that form the basis for moral decisions universal needs food perennial aspirations friendships central necessary conditions job security and critical contingent factors under special circumstances land reform in a landholder ruled society In his new introduction Edel applies those factors to the present day discussing societal changes over the past forty years such as the number of women in the workforce the impact of the civil rights movement and the fact that isolationism as a national policy is no longer feasible *Ethical Judgment* is a recognized classic in the modern study of ethical theory It will be valuable reading for sociologists historians and all scholars interested in the study of ethics and American culture

Scientism: Science, Ethics and Religion Mikael Stenmark, 2020-10-28 This title was first published in 2011 2001 The intellectual and practical successes of science have led some scientists to think that there are no real limits to the competence of science and no limits to what can be achieved in the name of science This view and similar views have been called Scientism In this book scientists' views about science and its relationship to knowledge ethics and religion are subjected to critical scrutiny A number of natural scientists have advocated Scientism in one form or another Francis Crick Richard Dawkins Carl Sagan and Edward O Wilson and their impact inside and outside the sciences is considered Clarifying what Scientism is this book proceeds to evaluate its key claims expounded in questions such as is it the case that science can

tell us everything there is to know about reality Can science tell us how we morally ought to live and what the meaning of life is Can science in fact be our new religion Ought we become science believers The author addresses these and similar issues concluding that Scientism is not really science but disguised materialism or naturalism its advocates fail to see this not being sufficiently aware that their arguments presuppose the previous acceptance of certain extra scientific or philosophical beliefs

Doing the Right Thing Scientific American Editors, 2013-11-25 Doing the Right Thing Ethics in Science by the Editors of Scientific American Most of us have probably had those discussions either in a classroom setting or otherwise where a hypothetical situation is given and you re asked to choose between two or more unsatisfying options If you follow option A five people die if you follow option B one person dies What do you do Option B looks like the lesser of the evils but then there s a wrinkle Option B requires you to actively murder the one person to save five Now what do you do Making ethical decisions involves more than listening to an inner moral compass a feeling in the gut of what s right and wrong and questions of ethics in science are becoming increasingly complex especially as technology encroaches upon even our most private cellular spaces In this eBook Doing the Right Thing Ethics in Science we cover a wide range of areas in science and medicine where complicated ethical questions come to bear beginning with the first section Genomics In Are Personal Genome Scans Medically Useless Sally Lehrman examines the value or lack thereof in the information obtained from direct to

consumer genotyping tests a field that exploded in the 00s The middle sections are devoted to ethics in research where informed and ethically sound choices are the basis of many scientific studies Sections 2 3 and 4 analyze the challenges unique to three areas respectively medical pharmaceutical and basic research Medical studies often reveal more information than researchers are looking for and two articles The Ethics of Scan and Tell and Reporting Unrelated Findings in Study Subjects examine questions of responsibility toward study subjects Later Charles Seife ferrets out doctors financial ties to pharmaceutical companies in Is Drug Research Trustworthy and Katherine Harmon calculates The Cost of Misconduct to the taxpayer Finally Section 6 Ethics and the Mind analyzes the process of how we resolve moral conflicts when we make decisions The interaction between reasoning and emotion is poorly understood as seen in both Anguish and Ethics and When Morality Is Hard to Like but studies show that the emotional and memory regions of the brain are more active when confronted with difficult moral questions These decisions are usually made after great inner struggle think again of option B What would you do
