Frank B. Jevons

Science And Necessity:

Science and Necessity John Bigelow, Robert Pargetter, 1990 This book espouses an innovative theory of scientific realism in which due weight is given to mathematics and logic The authors argue that mathematics can be understood realistically if it is seen to be the study of universals of properties and relations of patterns and structures the kinds of things which can be in several places at once Taking this kind of scientific platonism as their point of departure they show how the theory of universals can account for probability laws of nature causation and explanation and explore the consequences in all these fields This will be an important book for all philosophers of science logicians and metaphysicians and their graduate students The readership will also include those outside philosophy interested in the interrelationship of philosophy and science

Avicenna's Theory of Science Riccardo Strobino, 2021-11-09 Avicenna is the most influential figure in the intellectual history of the Islamic world This book is the first comprehensive study of his theory of science which profoundly shaped his philosophical method and indirectly influenced philosophers and theologians not only in the Islamic world but also throughout Christian Europe and the medieval Jewish tradition A sophisticated interpreter of Aristotle's Posterior Analytics Avicenna took on the ambitious task of reorganizing Aristotelian philosophy of science into an applicable model of scientific reasoning striving to identify conditions of certainty for scientific assertions and conditions of adequacy for real definitions Riccardo Strobino combines philosophical and textual analysis to explore the scope and nature of Avicenna's contributions to the logic of scientific reasoning in his effort to recalibrate Aristotle's model and overcome some of its internal limitations Focusing on a broad array of philosophical innovations at the intersection of logic metaphysics and epistemology this book casts light on an essential aspect of the thought of the preeminent philosopher and physician of the Islamic world On
