Encyclopedia of Ecology Brian D. Fath, 2018-08-23
Encyclopedia of Ecology Second Edition Four Volume Set continues the acclaimed work of the previous edition published in 2008. It covers all scales of biological organization from organisms to populations to communities and ecosystems. Laboratory field simulation modelling and theoretical approaches are presented to show how living systems sustain structure and function in space and time. New areas of focus include micro and macro scales, molecular and genetic ecology and global ecology e.g. climate change, earth transformations, ecosystem services and the food-water-energy nexus are included. In addition, new international experts in ecology contribute on a variety of topics. Offers the most broad ranging and comprehensive resource available in the field of ecology. Provides foundational content and suggests further reading. Incorporates the expertise of over 500 outstanding investigators in the field of ecology including top young scientists with both research and teaching experience. Includes multimedia resources such as an Interactive Map Viewer and links to a CSDMS Community Surface Dynamics Modeling System, an open source platform for modelers to share and link models dealing with earth system processes.

Handbook of Citizen Science in Ecology and Conservation Christopher A. Lepczyk, 2020-04-28
Handbook of Citizen Science in Ecology and Conservation is the first practical and comprehensive manual for creating, implementing or improving natural science research and monitoring projects that involve collaboration between scientists and the general public. As citizen science projects become increasingly common, project leaders are seeking information on concrete best practices for planning and implementing projects, practices that allow them to guide and gauge success while also ensuring the collection of high quality data and rewarding experiences for volunteers. In this handbook, citizen science practitioners from around the world and with decades of experience provide step-by-step instructions, insights and advice, and they explore real-world applications through case studies from a variety of citizen science projects. This is the definitive reference guide for anyone interested in starting or improving a citizen science project with ecological or conservation applications, from professors and graduate students to agency staff and nongovernmental organizations.

Science Projects about the Environment and Ecology Robert Gardner, 1999
This book presents experiments that deal with the surrounding atmosphere, soil, water, plants and climate. The experiments use simple and inexpensive materials that are available around the home or school. Safety warnings appear throughout the book when applicable to the particular experiments. Most experiments are great starts for science fair projects and fill the need for more challenging experiments for junior and senior high students.
