Peace And The War Industry:

Peace and the War Industry Kenneth Ewart Boulding, More and more people are demanding an end to violence as a means of arbitrating international demands and resolving problems between nations This collection of essays brings social scientific evidence to bear on the question of the inevitability of war and evaluates the potential for managing the international system in the interest of peace instead of war The contributors discuss methods of lowering distrust among DEGREESnations they consider whether war persists because it has become an economic necessity built into a military industrial complex They deal with implications of expansion of the military into civilian areas such as education and into increasingly sophisticated technology such as the ABM Safeguard system They discuss the involvement of social scientists in the formulation of peace and war policy Collectively these essays present the most serious questions social scientists have been asking about problems of war and peace and offer hope that the present international system dangerous and appallingly costly as it is may offer enough stability to give us time to transform it into something that better serves human needs

Committee on Military Affairs, 1926 *Games to Play and Games not to Play* Uri Weiss, Joseph Agassi, 2023-05-18 This book contributes to the theoretical discussions of equilibria that rest on error in which we include mistaken choices of games to play Extant game theory recommends diverse strategies plans of actions for various given games particularly those in Nash equilibria in which no player benefits from one sided strategy alteration The literature also refers to the design of games that fit given goals This is the mechanism design theory its function is to serve social planners ignorant of the preferences of the people intended to play them Our study of games avoidance adds to game theory the meta game of choosing what game to play and what game to avoid playing and that both players and planners can generate This comprises

a shift from the maximalist position that aims to maximize possible profit to the minimalist one that aims at minimizing possible loss This shift depends on the question considering the public interest what set of games is it advisable to encourage Obviously it is advisable to encourage playing some groups of games such as trade as well as to discourage playing other groups of games such as wars This shift makes the theory much more applicable to social science usually choosing what game to play is less practical than choosing what game not to play This invites legislation and similar incentives their study should aim at the improvement of their usefulness Discussing the possibility of changing both game and strategy renders game theory part and parcel of social science For this mathematical models will not do it requires a clear distinction between describing options and explaining situations Explanations may enhance efforts at improvement
