Pectines And Pectinases:

Pectins and Pectinases J. Visser,A.G.J. Voragen,1996-12-06 Pectins are one of the classes of complex structural plant cell wall polysaccharides They are localized in the middle lamella and primary cell wall of higher plants Pectins have a long standing use as gelling agents whereas their enzymatic degradation or modification plays an important role in the processing of agricultural crops and the manufacturing of foods and beverages Progress in pectin and pectinase research has been most prominent in two areas over the past 5 years The first one concerns the analysis and elucidation of the complex chemical structure of pectin and identification of novel enzymes involved in the degradation of these structures The second area concerns the mode of action and the 3 dimensional structure of various pectin degrading enzymes as well as the cloning of a large number of genes encoding enzymes involved in pectin degradation and modification This book covers the following topics First the structural physical and chemical properties of pectin are treated followed by information about its biosynthesis and about the biological effects of pectin and its degradation products in biological systems such as plant pathogen interactions and human nutrition Identification of novel enzymes the mode of action of different pectinases and the 3 D structure of bacterial pectate lyases forms the second block This is followed by the genetics and regulation of pectinase biosynthesis in saprophytic and phytopathogenic microbial systems as well as in plant systems Finally developments in pectin manufacturing and application of pectinases in traditional food beverage and novel technologies are treated This book is meant for those actively involved in fundamental and applied aspects of pectin and pectinase research but it is also of value for those interested in plant cell wall biosynthesis and architecture phytopathology food technology and human nutrition This book not only reflects the present status of research in the field but it will turn out to be a very useful reference work as well

Advances in Pectin and Pectinase Research A. G. J. Voragen,Henk Schols,Richard Visser,2003-02-28 It is clearly demonstrated that significant progress has been made during the past seven years *Advances in Pectin and Pectinase Research* Fons Voragen,Henk Schols,R.G.F. Visser,2013-03-09 The second international symposium on Pectins and Pectinases was organised by Wageningen University and Research Centre and was held in Rotterdam May 6 10 2001 This fruitful meeting was attended by around 130 participants from more than 20 countries representing almost all of the groups industries working worldwide on pectins and pectinases Following the first meeting on this subject held in December 1995 the symposium definitely forms a platform for researchers and industries working in the field all within their own discipline and expertise The symposium book contains most keynote lectures and other oral presentations and provides an update about the current research It is clearly demonstrated that significant progress has been made during the past seven years The progress in the elucidation of the chemical structure of pectin and mode of action and 3 D structure of the pectin degrading enzymes allows us more and more to identify and influence the functionality of pectins and pectic enzymes both in vitro after isolation as well as in the plants themselves in planta Other contributions deal with new applications of both pectin

and pectin degrading enzymes while more and more attention is paid to health and nutritional aspects of pectins
