Pediatric Cardiac Catheterization:

Congenital Heart Disease P. Syamasundar Rao, 2012-01-18 There are significant advances in the understanding of the molecular mechanisms of cardiac development and the etiology of congenital heart disease CHD However these have not yet evolved to such a degree so as to be useful in preventing CHD at this time Developments such as early detection of the neonates with serious heart disease and their rapid transport to tertiary care centers availability of highly sensitive noninvasive diagnostic tools advances in neonatal care and anesthesia progress in transcatheter interventional procedures and extension of complicated surgical procedures to the neonate and infant have advanced to such a degree that almost all congenital cardiac defects can be diagnosed and corrected Treatment of the majority of acyanotic and simpler cyanotic heart defects with currently available transcatheter and surgical techniques is feasible effective and safe The application of staged total cavo pulmonary connection Fontan has markedly improved the long term outlook of children who have one functioning ventricle This book I hope will serve as a rich source of information to the physician caring for infants children and adults with CHD which may help them provide optimal care for their patients Pediatric Cardiac Catheterization William H. Neches, Sang C. Park, J. R. Zuberbuhler, 1991-01-01 *Cardiac Catheterization in Congenital Heart Disease* Charles E. Mullins, 2008-04-15 The rapidly growing population of adults surviving with congenital heart lesions along with the success of interventional cardiology in the child and adolescent has spawned an incredible interest in adapting the technology for the adult congenital patients Dr Mullins a pioneer in this area has written an outstanding reference which covers all aspects of performing diagnostic and therapeutic cardiac catheterization procedures on patients of all ages This illustrated book details the equipment and techniques for performing safe and successful procedures with a strong emphasis on avoiding complications It also includes the requirements of a catheterization laboratory for congenital heart patients as well as guidance for setting up and operating such a laboratory *Cardiac Catheterization in Congenital Heart Disease* serves as an essential manual for pediatric and adult interventional cardiologists worldwide **Diagnostic and Interventional Catheterization in Congenital Heart Disease** James E. Lock, John F. Keane, Stanton B. Perry, 2000 Cardiac catheterization has long been a central diagnostic modality in the evaluation of children adolescents and adults with congenital heart disease and in children with acquired heart disease Over the past two decades transcatheter interventions have become equally important in the treatment of pediatric and congenital heart disease Some transcatheter therapies have become established as the standard of care for congenital cardiovascular anomalies previously managed surgically others serve to supplement surgery in the integrated management of complex lesions and still others are in their infancy as pediatric interventional cardiology continues to advance in step with the broader field of pediatric cardiovascular medicine Since the previous edition of this book new technologies and techniques have been introduced to the field of pediatric interventional cardiology much has been learned about established transcatheter therapies and there has been a substantial increase in the volume of

published data on outcomes of transcatheter procedures in congenital and pediatric heart disease With increasing experience the role of interventional catheterization has become solidified as an integral component of the comprehensive management of patients with essentially all forms of congenital heart disease Cardiac catheterization has also become established as a distinct subspecialty within the discipline of pediatric cardiology and at many centers has become the purview of cardiologists who have received specialized training in interventional catheterization and whose practice is focused on catheterization This book is targeted to trainees and established interventional cardiologists alike and is intended as a comprehensive reference for the clinical practice of diagnostic and interventional cardiology in pediatric and congenital heart disease In the organization of this book a combination of procedure based and problem based approaches has been employed The structure of the book has been updated to make it more reader friendly chapters have been added to address new techniques and problems in the field and greater emphasis has been placed on evaluation of outcomes of transcatheter interventions in congenital heart disease Section 1 covers the fundamentals of cardiac catheterization with chapters devoted to pre procedure patient evaluation sedation and anesthesia vascular access and related issues catheterization equipment and its use hemodynamic evaluation angiography radiation and radiation safety and echocardiography in the catheterization lab Sections 2 through 4 include procedure based chapters that are organized according to the technical type of intervention Section 2 is devoted to transcatheter interventions for obstructive lesions including valvar stenoses and vascular obstructions Section 3 includes chapters that cover interventions to close various pathologic intracardiac communications and vascular anomalies Section 4 includes chapters covering interventions performed to create or enlarge intracardiac communications as well as other interventions Section 5 focuses on the applications of catheterization and transcatheter interventions in the evaluation and management of specific patient populations This problem based or patient based focus which is substantially expanded from the previous edition of the book reflects the expanding role of catheterization in the comprehensive management of pediatric and congenital heart disease and addresses emerging applications of transcatheter interventions including management of the patient receiving extracorporeal circulatory support hybrid transcatheter surgical interventions and prenatal cardiac intervention Section 6 includes two chapters that cover outcome assessment and regulatory issues pertinent to the pediatric cardiology in general and interventional cardiology in particular

Cardiac Catheterization and Imaging (From Pediatrics to Geriatrics) IB Vijayalakshmi, 2015-08-31 Cardiac Catheterization and Imaging is an all encompassing richly illustrated guide to cardiac catheterisation and catheter based intervention from the foetus to the geriatric patient The book is divided into 72 chapters across twelve sections covering everything from the history of cardiac catheterisation patient preparation imaging modalities available in preparation and during the procedure and the equipment required Beginning with the history and basics of catheterisation and a section on haemodynamics subsequent sections cover a range of interventional techniques for heart disease Further sections bring the text firmly up to date with recent techniques

in valvular aortic disease covered a chapter on current indications for interventions in adults with congenital heart disease and the latest equipment available for cardiovascular support Each chapter concerning a specific condition follows a regular format a concise discussion on the disorder indications procedural details precautions and potential pitfalls With nearly 2100 images and illustrations spanning 1134 pages Cardiac Catheterization and Imaging is an invaluable comprehensive resource for cardiologists Key Points Comprehensive illustrated guide to cardiac catheterisation from foetus to geriatric patient Covers history basics haemodynamics various interventions and equipment 2097 images and illustrations *Pediatric Cardiac Anesthesia* Carol L. Lake, Peter D. Booker, 2005 Long established as the 1 reference on pediatric cardiac anesthesia this definitive text is now in its thoroughly revised Fourth Edition The book provides comprehensive guidelines on preoperative evaluation perioperative management and postoperative care for all pediatric cardiac surgical procedures and includes quick reference summaries of perioperative management for each procedure For this edition Dr Lake is joined by an eminent British co editor Peter D Booker and an international group of distinguished contributors Coverage includes cutting edge information on echocardiography fast tracking and the newest surgical techniques New chapters cover teaching practice management anesthesia for cardiac MIS and hemostasis coagulation and transfusion **Atlas of Cardiac Catheterization for Congenital Heart Disease** Gianfranco Butera, Massimo Chessa, Andreas Eicken, John D. Thomson, 2019-03-11 This atlas depicts and describes catheter based interventions across the entire pediatric age range from fetal life through to early adulthood with the aim of providing an illustrated step by step guide that will help the reader to master these techniques and apply them in everyday practice Clear instruction is offered on a wide range of procedures including vascular access fetal interventions valve dilatation angioplasty stent implantation defect closure defect creation valve implantation hybrid approaches and other miscellaneous procedures The atlas complements the previously published handbook Cardiac Catheterization for Congenital Heart Disease by presenting a wealth of photographs images and drawings selected or designed to facilitate the planning performance and evaluation of diagnostic and interventional procedures in the field of congenital heart disease It will assist in the safe efficient performance of these procedures in decision making and in the recognition and treatment of complications Congenital Heart Disease Lisa Bergersen, Susan Foerster, Audrey C. Marshall, Jeffery Meadows, 2008-11-01 This practical manual provides a comprehensive overview of how the cardiac catheterization laboratory in a pediatric cardiology division works Chapters are organized in the order in which a case progresses Hemodynamics is covered in depth **Invasive Cardiology** Sandy Watson, Kenneth Gorski, 2010-10-15 Completely revised and updated Invasive Cardiology A Manual for Cath Lab Personnel Third Edition is the first and only book written specifically by and for nurses and technicians Topics include ECG interpretation intracardiac pressure measurement radiography intracoronary Doppler intravascular ultrasound duties of technical staff angiography and cardiac catheterization PTCA stents atherectomy laser nursing care valvuloplasty and balloon pericardiotomy electrophysiology cardiac pacing

Pediatric Cardiovascular Medicine James H. Moller, Julien I. E. Hoffman, 2012-03-12 The first edition of this text edited by two of the world's most respected pediatric cardiologists set the standard for a single volume clinically focused textbook on this subject This new edition revised and updated by contributors representing today's global thought leaders offers increased coverage of the most important current topics such as pediatric electrophysiology congenital heart disease cardiovascular genetics genomics and the identification and management of risk factors in children while maintaining the clinical focus Published with a companion website that features additional images for download self assessment questions designed to aid readers who are preparing for examinations and other features Pediatric Cardiovascular Medicine Second Edition is the perfect reference for residents fellows pediatricians as well as specialists in pediatric cardiology

Transcatheter Therapy in Pediatric Cardiology P. Syamasundar Rao, 1993-03-24 Transcatheter Therapy in Pediatric Cardiology Editor P Syamasundar Rao New interventional techniques such as balloon angioplasty and transcatheter occlusion have enabled cardiologists to treat a wide range of heart defects with dramatically less risk and morbidity than surgical correction Transcatheter Therapy in Pediatric Cardiology fully describes the state of the art clinical procedures used in this rapidly expanding field integrating the substantial progress of the last ten years The text offers detailed accounts of the various transcatheter techniques currently employed for specific pediatric conditions and discusses relevant aspects of their immediate and long term results potential complications applicability of findings to adult patients and comparisons with surgical treatment While the main focus of the book is on balloon angioplasty valvuloplasty and transcatheter closure of septal defects chapters also address such related topics as balloon and blade atrial septostomy selective embolization of abnormal blood vessels and transcatheter removal of foreign bodies Specific topics covered in the book include balloon and blade atrial septostomy balloon pulmonary valvuloplasty angioplasty balloon dilatation of fixed subaortic stenosis catheter closure of the ductus arteriosus transcatheter ablation in the treatment of dysrhythmia Transcatheter Therapy in Pediatric Cardiology is an indispensable reference for all pediatric cardiologists and for internist cardiologists managing adults with congenital heart disease Pediatricians cardiovascular surgeons neonatologists and pediatric intensive care specialists will also find this book to be an excellent source of practical information

Anaesthesia Technique Evaluation: Pediatric Cardiac Catheterization Manoj Kumar Sharma, 2012 Dr Werner Frossmann in 1926 was the pioneer in introducing the concept of cardiac catheterization in human beings Cardiac catheterization in the pediatric population was first reported by Dexter and his colleagues in 1947 Since congenital heart diseases occur in 0.3% to 1.2% of all live births the pediatric patients are therefore the frequent visitors to our cardiac catheterization laboratory The typical nature of the pediatric age group and the stringent requirements of the cardiac catheterization procedures warrant the need for a calm motionless anxiety less and sedated patient Various techniques of anaesthesia using different drugs independently

or in combination have been tried till date but none has stood ideal so far In this study we evaluated Propofol and ketamine for their efficacy to achieve maximal and near to ideal criterias required for anaesthetizing pediatric patients undergoing diagnostic or interventional cardiac catheterization procedures We also compared evaluated and discussed their advantages and disadvantages on various parameters needed to accomplish an accurate cardiac chamber study for conducting various diagnostic and therapeutic interventions
