Zhai, Yue Zhao, Taiping Zhao, 2016-07-25 This book focuses on the metallogeny and main tectonic events of the North China Craton from early Precambrian to Phanerozoic. It covers the Archean crustal growth, Paleoproterozoic rifting, subduction, collision processes, Great Oxidation Event, Meso-Neoproterozoic multiple rifting, Phanerozoic reworking of the North China Craton, as well as metallogeny related to above different processes. The North China Craton is one of the oldest cratons in the world. It has experienced a complex geological evolution since the early Precambrian and carries important records of secular changes in tectonics and metallogeny. It provides a systematic review and new results on the growth and evolution of the North China Craton and metallogeny. It will be of broad interest to the earth scientists working in the fields of economic geology, geochemistry, and tectonics of the North China Craton and eastern Asian. *Geochemistry of Strata Bound Deposits in China* Guangchi Tu, 1996

**Earth's Oldest Rocks** Martin J. Van Kranendonk, Vickie Bennett, Elis Hoffmann, 2018-09-26

Earth's Oldest Rocks Second Edition is the only single reference source for geological research of early Earth. This new edition is an up to date collection of scientific articles on all aspects of the early history of the Earth from planetary accretion at 4.567 billion years ago Ga to the onset of modern style plate tectonics at 3.2 Ga. Since the first edition was published significant new advances have been made in our understanding of events and processes on early Earth that correspond with new advances in technology. The book includes contributions from over 100 authors all of whom are experts in their respective fields. The research in this reference concentrates on what is directly gleaned from the existing rock record to understand how our planet formed and evolved during the planetary accretion phase, formation of the first crust, the changing dynamics of the mantle and style of tectonics, life's foothold and early development and mineral deposits. It is an ideal resource for academics, students and the general public alike. Advances in early Earth research since 2007 based primarily on evidence gleaned directly from the rock record. More than 50% of the chapters in this edition are new and the rest of the chapters are revised from the first edition with more than 700 pages of new material. Comprehensive reviews of areas of ancient lithosphere from all over the world and of crust forming processes. New chapters on early solar system materials, composition of the ancient atmosphere, hydrosphere and overviews of the oldest evidence of life on Earth and modeling of early Earth tectonics.
