with a survey of the most important archaeological discoveries in North America. Leading scholars, most with an intimate knowledge of the area, have written in-depth essays on over 300 of the most important archaeological sites that explain the importance of the site, the history of the people who left the artifacts, and the nature of the ongoing research. Archaeology in America divides its coverage into 8 regions: the Arctic and Subarctic, the Great Basin and Plateau, the Great Plains and Rocky Mountains, the Midwest, the Northeast, the Southeast, the Southwest, and the West Coast. Each entry provides readers with an accessible overview of the archaeological site as well as books and articles for further research.

*Mammoth Cave* Horton H. Hobbs III, Rickard A. Olson, Elizabeth G. Winkler, David C. Culver, 2017-06-14. This book reveals the science and beauty of Mammoth Cave, the world's longest cave, which has played an important role in the natural sciences. It offers a comprehensive and interdisciplinary treatment of the cave, combining insights from leading experts in fields ranging from archaeology and cultural history to life science and geosciences. The first animals specialized for cave life in North America, including beetles, spiders, crayfish, and fish, were discovered in Mammoth Cave in the 1840s. It has also been used and explored by humans, including Native Americans who mined its sulfate minerals and later African American slaves who made a map of the cave. More recent stories include wars between commercial cave owners, epic exploration trips by modern cave explorers, and of course, tourism. The first section of the book is an extensive description, including maps and photos of the cave, its basic structural pattern, and how it relates to the surface landscape. The second section covers the human history of utilization and exploration of the cave, including mining, tourism, and medical experiments. Cave science is the topic of the third section, including geology, hydrology, mineralogy, climatology, paleontology, ecology, biodiversity, and microbiology. The fourth section looks to the future with an overview of environmental issues facing Mammoth Cave managers. The book is intended for anyone interested in caves in general and Mammoth Cave in particular, experts in one discipline seeking information about other areas, and researchers and students interested in the many avenues of pursuit possible in Mammoth Cave.

**Prehistoric Europe** James Geikie, 1881      **Prehistoric Man** Sir Daniel Wilson, 1876      **The Dead Tell Tales** Maria Cecilia Lozada Barra O'Donnabhain, 2013-12-31. Honoring Jane Buikstra's pioneering work in the development of bioarchaeological research, the essays in this volume stem from a symposium held at the annual meeting of the Society for American Archaeology. Multiple generations of Buikstra's former doctoral students and other colleagues gathered to discuss the impact of her mentorship. The essays are remarkable for their breadth in terms of both the topics discussed and the geographical range they cover. The contributions highlight the dynamism of bioarchaeology, which owes so much to the strong foundations laid down over the last few decades. The volume documents the degree to which bioarchaeological approaches have become normalized and integrated into anthropological research; bioarchaeology has moved out of the appendix and into the interpretation of archaeological data. New perspectives have emerged, partly in response to theoretical changes within anthropology but also as a result of the engagement of the broader discipline with bioarchaeology.
