What Can We Learn From Those Who Have Passed On?

Prehistoric Mortuary Variability on Gabriola Island, British Columbia

by A. JOANNE CURTIN

Archaeology Press, Simon Fraser University, 2002. viii + 157 pp., illus., app., refs., index. Price: ISBN 0-86491-227-7, (Sc) \$25.00

Joanne Curtin's publication is a slightly revised version of her PhD dissertation at Ohio State University. One consequence is that the book is organized in the style of a dissertation as opposed to a more narrative format.

The book deals with the analysis of a set of burials from five burial features at two sites on Gabriola Island in the Gulf of Georgia region of British Columbia, and their comparison with burials from the nearby False Narrows midden. The organization follows that of a typical dissertation. In the first paragraph of chapter one, Curtin outlines the problem that she was researching and presents the three hypotheses that she wished to examine, specifically, that the two burial populations recovered on Gabriola Island represent either:

1. "diachronic variation in mortuary practices";
2. "different biological populations with different burial customs"; and
3. "different social groups within the same biological population."

Unfortunately, Curtin does not tell us until sometime later which population she is referring to. Next Curtin introduces the topic of mortuary analysis, beginning with a brief summary of the development of the subject, followed by observations on its application on the Northwest Coast and on Gabriola Island. Thus, this chapter provides a good introduction to the following description and discussion. It clearly outlines what is to follow and makes it much easier for readers to locate themselves in relation to the data Curtin presents.

In the second chapter, "The Study Area," Curtin describes the geography, geology, and biology of the Gulf Islands, covering the time from the late Pleistocene to the present. It also provides an ethnographic overview of the study area. A regional culture history for the Gulf of Georgia follows, relying on generally accepted chronologies and classifications. Last is a summary of the prehistory of the Nanaimo area, including Gabriola Island. By the end of the first two relatively short chapters, a total of 16 pages, the problem, its theoretical background, and the context

and prehistory of the study area have been summarized. While somewhat condensed, this provides the reader with the necessary background information to situate the analysis that follows.

In chapter three, Curtin describes the methods used to address her hypotheses. She outlines the reconnaissance methods for the Gabriola Island sites, including definitions of the recorded data types. A description of the excavation and data collection methods for human remains follows, with appropriate definitions provided. The author describes how she reconstructed and conjoined the various bone fragments and elements found, and how she collected data from the

reconstructed parts. A section on comparisons of the Gabriola Island burials that she recovered with those from the False Narrows midden is included, with descriptions of the False Narrows materials, and of the method for determining biological distance, or similarity, between the two sample sets.

In chapter four, Curtin discusses the site reconnaissance of a three kilometer long section of the False Narrows bluff on Gabriola Island. Three site areas are described, one of which (DgRw 204) is the subject of this study and two of which (DgRw 210 and 213) are not. A second study area (DgRw 199) is mentioned in the previous chapter but is not described in detail as are the three sites presented in this chapter. It would seem useful to have similar descriptions of both study sites in the same chapter.

Chapters five through nine are reports on five burial features from two sites (DgRw 204 and 199). Each provides a description of the feature, the results of the excavations, a description of the matrix of the feature, a listing of faunal remains, a list of artifacts recovered, dates for the features, and a discussion of the recovery and analysis of the human remains. Included in the discussion of buried remains are observations on the conditions of the remains, the spatial distribution of remains, skeletal reconstruction, evidence for burning, demographic information, skeletal anomalies and pathologies, and mortuary practices. The largest of the burial features is DgRw 199 - F1, which is given the longest description and discussion. Some of the remains from this feature and from DgRw 199 - F9 exhibit burning, and some exhibit a variety of pathologies such as degenerative joint disease, developmental defects, dental anomalies, fractures, cultural modification of one individual's skull, and infectious diseases; specifically there were three individuals, and possibly another, diagnosed as suffering from treponemal infections. The data in these chapters are presented in a

human burials were our only window onto the past what story would they tell Skeletal injuries constitute the most direct and unambiguous evidence for violence in the past Whereas weapons or defenses may simply be statements of prestige or status and written sources are characteristically biased and incomplete human remains offer clear and unequivocal evidence of physical aggression reaching as far back as we have burials to examine Warfare is often described as senseless and as having no place in society Consequently its place in social relations and societal change remains obscure The studies in The Routledge Handbook of the Bioarchaeology of Human Conflict present an overview of the nature and development of human conflict from prehistory to recent times as evidenced by the remains of past people themselves in order to explore the social contexts in which such injuries were inflicted A broadly chronological approach is taken from prehistory through to recent conflicts however this book is not simply a catalogue of injuries illustrating weapon development or a narrative detailing progress in warfare but rather provides a framework in which to explore both continuity and change based on a range of important themes which hold continuing relevance throughout human development **Journal of Northwest**

Equally important is the development of much more detailed local and regional history and archaeology. They point to significant continuity of networks of kinfolk spiritual practices and understandings of landscape. This is the first book length effort to directly incorporate Aboriginal perspectives and a broad interdisciplinary approach to research about the Coast Salish.

Northwest Coast Madonna L. Moss, 2011-10-03 From the SAA Press Current Perspectives Series this concise overview of the archeology of the Northwest Coast of North America challenges stereotypes about complex hunter gatherers. Madonna Moss argues that these ancient societies were first and foremost fishers and food producers and merit study outside socio evolutionary frameworks. Moss approaches the archaeological record on its own terms recognizing that changes through time often reflect sampling and visibility of the record itself. The book synthesizes current research and is accessible to students and professionals alike.
