Science Optics And Music In Medieval And Early Modern Thought:

Science, Optics, and Music in Medieval and Early Modern Thought, 1990 **Medieval Science, Technology, and Medicine** Thomas F. Glick, Steven John Livesey, Faith Wallis, 2005 Demonstrates that the millennium from the fall of the Roman Empire to the flowering of the Renaissance was a period of great intellectual and practical achievement and innovation This reference work will be useful to scholars students and general readers researching topics in many fields of study including medieval studies and world history *Routledge Revivals: Medieval Science, Technology and Medicine (2006)* Thomas Glick, Steven J. Livesey, Faith Wallis, 2017-07-05 First published in 2005 this encyclopedia demonstrates that the millennium from the fall of the Roman Empire to the Renaissance was a period of great intellectual and practical achievement and innovation In Europe the Islamic world South and East Asia and the Americas individuals built on earlier achievements introduced sometimes radical refinements and laid the foundations for modern development Medieval Science Technology and Medicine details the whole scope of scientific knowledge in the medieval period in more than 300 A to Z entries This comprehensive resource discusses the research application of knowledge cultural and technology exchanges experimentation and achievements in the many disciplines related to science and technology It also looks at the relationship between medieval science and the traditions it supplanted Written by a select group of international scholars this reference work will be of great use to scholars students and general readers researching topics in many fields including medieval studies world history history of science history of technology history of medicine and cultural studies *Marin Mersenne and the Study of Harmony* Leendert Miesen, 2025-10-01 Marin Mersenne and the Study of Harmony delves into the central role of music among the early modern sciences by focusing on the work of the French polymath Marin Mersenne 1588 1648 Although now regarded more as an art than a science music was for many early modern scholars a universal science for studying the harmonies present in all beings For Mersenne music s ability to be quantified while being experienced aesthetically meant that it was the central science to approximate the sounding and inaudible harmonies present in the world and universe at large Bringing together Mersenne s interests in the physics of sound and hearing musical composition instruments curiosities and music from outside Europe this book shows why so many scholars were drawn to music and how music was at the center of the early modern debate on the foundations of knowledge **Time for Science Education** Michael Matthews, 2012-12-06 The book s argument depends as do most proposals in education upon cer tain positions in the philosophy of education I believe that education should be primarily concerned with developing understanding with initiation into worth while traditions of intellectual achievement and with developing capacities for clear analytic and critical thought These have been the long accepted goals of liberal education In a liberal education students should come to know and appreciate a variety of disciplines know them at an appropriate depth see the interconnectedness of the disciplines or the modes of thought and finally have some critical disposition toward what is being learned to be genuinely open minded about

intellectual things These liberal goals are contrasted with goals such as professional training job preparation promotion of self esteem social engineering entertainment or countless other putative purposes of schooling that are enunciated by politicians administrators and educators The book s argument might be consistent with other views of education especially ones about the training of specialists sometimes called a professional view of education but the argument fits best with a liberal view of education The liberal hope has always been that if education is done well then other personal and social goods will follow The development of informed critical and moral capacities is the cornerstone for personal and social achievements

Homo Faber and Homo Economicus in the Scientific Revolution Ahmet Selami Çalışkan,2022-04-24

This book tells the story of how the servile arts turned into the mechanical arts which in turn developed into a kind of philosophical apparatus that made modern science possible Why did the scientific revolution take place in the West and not in China or the Islamic world How did humanity s progress in science and technology which had been moving along at a relatively steady pace for tens of thousands of years end up taking such an unprecedented leap Subjecting the history of thought and technology to a novel interpretation based on the relationship between theory and practice Ahmet Selami al kan argues that the industrial revolution and modern science and the scientific revolution that preceded both did not alone suffice to sort out the philosophical problems of their day or to produce the institutions of the modern age Both required a new sort of human Homo economicus faber Tracing the historical emergence of this figure and its persistence in our own age this book offers an innovative and holistic assessment of the economic cultural and political effects of centuries of interaction between East and West and their repercussions in our world today
