

The process of sexual reproduction versus several forms of parthenogenesis

Sexual Ecology

Stan Braude

Sexual Ecology:

Beyond Sexuality Tim Dean, 2000-09 *Beyond Sexuality* points contemporary sexual politics in a radically new direction Combining a psychoanalytic emphasis on the unconscious with a deep respect for the historical variability of sexual identities this original work of queer theory makes the case for viewing erotic desire as fundamentally impersonal Tim Dean develops a reading of Jacques Lacan that rather than straightening out this notoriously difficult French psychoanalyst brings out the queer tensions and productive incoherencies in his account of desire Dean shows how the Lacanian unconscious deheterosexualizes desire and along the way he reveals how psychoanalytic thinkers as well as queer theorists have failed to exploit the full potential of this conception of desire The book elaborates this by investigating social fantasies about homosexuality and AIDS including gay men's own fantasies about sex and promiscuity in an attempt to illuminate the challenges facing safe sex education Taking on many shibboleths in contemporary psychoanalysis and queer theory and taking no prisoners *Beyond Sexuality* offers an antidote to hagiographical strains in recent work on psychoanalysis Foucault and sexuality Focus, 1997 **Immovable Laws, Irresistible Rights** Christine Pierce, 2000 Same sex partnerships Pregnancy through in vitro fertilization Ending one's own life in dignity All are deemed inherently wrong by the standards of natural law ethics but for many people they represent legitimate life choices that are morally right Now a leading feminist critic of the natural law tradition explores the ongoing confrontation between natural law and moral rights to argue that rights constitute a more solid grounding for ethics in human affairs and for feminist thought In this volume Christine Pierce's important essays including the celebrated *Natural Law Language and Women* expand reflect and refine this central controversy Reaching back to Aristotle and Aquinas and drawing on modern papal encyclicals and Supreme Court cases Pierce demonstrates that the natural law tradition with its doctrine of a supposed hierarchy of natural purpose has served to mystify women's nature and thereby justify restricting women to a predetermined social stratum Addressing issues that concern not only feminism but legal theory as well she defends her views on equality and universalization against a growing postmodern critique and presents rights theory as an alternative to an ethics of responsibility based on Aristotelian notions of friendship and trust Through tightly constructed arguments presented in engaging prose Pierce conveys her deep knowledge of legal philosophy and her passion for rights as she takes on such issues as AIDS gay marriage animal liberation and feminist separatism She combats the prevailing view of Plato as sexist and explores Sartre's views of holes and slime She also examines the work of contemporary authors in ecology biology sociobiology and religion to reveal their reliance on nature for ethical conclusions and she criticizes recent efforts to root a feminist natural law in Thomism With natural law concepts now in fashion with many conservatives and even some Supreme Court justices Pierce's essays offer a necessary perspective on where current legal and ethical thinking is headed *Immovable Laws Irresistible Rights* is invigorating reading for all scholars students and interested readers who seek a better understanding of these arguments and the issues affected by them

Rhetorical Secrets Davin Allen Grindstaff, 2014-05-15 Gay male identity as a product of rhetoric and public discourse in modern America

An Introduction to Methods & Models in Ecology, Evolution, & Conservation Biology Stan Braude, 2010 Populations demography genetics

Phylogenetics and Ecology Paul Eggleton, Richard I. Vane-Wright, Linnean Society of London, 1994-11-10 The relationship between systematics and ecology has recently been invigorated and developed a long way from the old field of comparative biology This change has been two fold Advances in phylogenetic research have allowed explicit phylogenetic hypotheses to be constructed for a range of different groups of organisms and ecologists are now more aware that organism traits are influenced by the interaction of past and present This volume discusses the impact of these modern phylogenetic methods on ecology especially those using comparative methods Although unification of these areas has proved difficult a number of conclusions can be drawn from the text These include the need for a working bridge between evolutionary biologists using logic based cladistic methods and those using probability based statistical methods for care in the selection of tree types for comparative studies and for systematists to attempt to analyse ecologically important groups Comparative ecologists and systematists need to come together to develop these ideas further but this volume presents a very useful starting point for all those interested in systematics and ecology

Ecology, 1998

The Nation, 1997

The Case for Gay Rights David A. J. Richards, 2005 As Americans wrestle with debates over traditional values defense of marriage and gay rights reason often seems to take a back seat to emotion In response legal scholar Richards reflects upon the constitutional and democratic principles relating to privacy intimate life free speech tolerance and conscience that underpin these often heated debates The distillation of Richards s thirty year advocacy for the rights of gays and lesbians his book provides a reflective treatise on basic human rights that touch all of our lives He places in context two key Supreme Court cases the 1986 Bowers v Hardwick decision and the 2003 Lawrence v Texas decision which overturned it Drawing upon his own experiences as a gay man Richards interweaves personal observations with philosophical political judicial and psychological insights to make a case that gays should be entitled to the same rights and protections that every American enjoys From publisher description

Ecology Abstracts, 2001 Coverage 1982 current updated monthly This database covers current ecology research across a wide range of disciplines reflecting recent advances in light of growing evidence regarding global environmental change and destruction Major areas of subject coverage include Algae lichens Animals Annelids Aquatic ecosystems Arachnids Arid zones Birds Brackish water Bryophytes pteridophytes Coastal ecosystems Conifers Conservation Control Crustaceans Ecosystem studies Fungi Grasses Grasslands High altitude environments Human ecology Insects Legumes Mammals Management Microorganisms Molluscs Nematodes Paleo ecology Plants Pollution studies Reptiles River basins Soil TAiga tundra Terrestrial ecosystems Vertebrates Wetlands Woodlands

Annual Review of Ecology, Evolution, and Systematics, 2007

Sexually Transmitted Infections Jonathan M. Zenilman, 2005 Sexually transmitted infections impact 14 million Americans annually This field is truly multidisciplinary

encompassing clinical infectious disease outpatient gynecology molecular diagnostics public health epidemiology and behavioral science In the past decade major advances have been made in all of these areas especially in the implementation of molecular diagnostics as standard for STD diagnosis and the development of effective behavioral interventions The behavioral and biological relationship between STD and HIV transmission is widely accepted Despite these advances new challenges appear such as the rapid increase in STDs among homosexual men or recent political challenges to scientifically grounded STD interventions This volume will provide a review of current topics in this exciting field and will address new developments in epidemiology surveillance diagnostics outreach interventions and therapy

Elements of Ecology

Thomas Michael Smith, Robert Leo Smith, 2006 KEY BENEFIT Elements of Ecology Sixth Edition maintains its engaging reader friendly style as it explains the basic principles of ecology The text is updated to include new chapters on current ecological topics new part introductions to connect the subfields of ecology and new in text features to encourage students to interpret the ecological data research and models used throughout the text Abundant accessible examples illustrate and clarify the text s emphasis on understanding ecological patterns within an evolutionary framework Additionally the text employs new study questions requiring students to make connections and apply their knowledge KEY TOPICS Introduction and Background The Nature of Ecology Adaptation and Evolution The Physical Environment Climate The Aquatic Environment The Terrestrial Environment Organismal Ecology Plant Adaptations Animal Adaptations Life History Patterns Population Ecology Properties of Populations Population Growth Interspecific Population Regulation Metapopulations The Ecology of Species Interactions Competition Predation Parasitism and Mutualism Community Ecology Community Structure Factors Influencing the Structure of Communities Community Dynamics Landscape Ecology Ecosystem Ecology Ecosystem Energetics Decomposition and Nutrient Cycling Biogeochemical Cycles Biogeographical Ecology Terrestrial Ecosystems Aquatic Ecosystems Land Water Interface Large scale Patterns of Biodiversity Human Ecology Population Growth Resource Use and Sustainability Habitat Decline Biodiversity and Conservation Ecology Global Climate Change MARKET For all readers interested in the basic principles ecology
