

## CHAPTER ONE

### INVENTORIES

#### 1.1 Nature of Inventories:

Inventory is used to indicate:

- (1) Asset items held for sale in the ordinary course of business,
- (2) Merchandise held for resale purpose in the normal operation of business and
- (3) Materials in the process of production or held for production. They are mainly divided into two major:
  - (A) **Inventories of merchandising businesses:** are merchandise purchased for resale in the normal course of business. These types of inventories are called merchandise inventories.
  - (B) **Inventories of manufacturing businesses:** manufacturing businesses are businesses that produce physical output. They normally have three types of inventories. These are: raw material inventory, work in process inventory and finished goods inventory

**Note:** In this chapter, we focus primarily on inventory of merchandise purchased for resale.

#### 1.2 Internal Control of Inventories:

The cost of inventory is a significant item in many businesses' financial statements. Not only must the cost inventory be determined, but good internal control over inventory must also be maintained. Two primary objectives of internal control over inventory are:

- (1) Safeguarding the inventory and
- (2) Properly reporting it in the financial statement (Balance sheet).

These internal controls can be either preventive or detective in nature. A **preventive control** is designed to prevent errors or misstatements from occurring. A **detective control** is designed to detect an error or misstatement after it has occurred.

Controls for safeguarding inventory begin as soon as the inventory is ordered. The following documents are often used for inventory control; purchase order, receiving report and vendor's invoice.

A **physical inventory** or count of inventory should be taken near year-end to make sure that the quantity of inventory reported in the financial statements is accurate. After the quantity of inventory on hand is determined, the cost of the inventory is assigned for reporting in the financial statements. Most companies assign costs to inventory using one of three inventory cost flow assumptions.

#### 1.3 Effect of Inventory Errors on Financial Statements:

Any errors in the inventory count will affect both the balance sheet and the income statement. **For example,** an error in the physical inventory will misstate the ending inventory, current assets, and total assets on the balance sheet. This is because the physical inventory is the basis for recording the adjusting entry for inventory shrinkage. Also, an error in taking the physical inventory misstates the cost of goods
