Shadow Of The Atom 1950 1960:

Shadow of the Atom, 1950-1960, 1991 **A Great Duty** Leonard B. Kuffert, 2003 In *A Great Duty* I L B Kuffert shows that the history of Canadian culture from the war to Canada's centenary is much richer and more complex than has previously been recognized. He looks at the responses of cultural critics to such topics as war reconstruction, science, conformity, personality, and commemoration, catching outspoken observers in the act of synthesizing new interpretations of the contemporary world and protesting the dominance of mass-produced entertainment. English Canadian cultural critics from across the political spectrum championed self-improvement, self-awareness, and lively engagement with one's surroundings, struggling to find a balance between the social benefits of democracy and modernization and what they considered the debilitating influence of the accompanying mass culture. They used print and broadcast media in an attempt to convince Canadians that choosing wisely between varieties of culture was an expression of personal and national identity, making cultural nationalism in Canada a middlebrow project. As Kuffert argues, if English Canadians are today more familiar with the ways in which modern life and mass culture envelop and define them, if they live in a nation where private citizens and cultural institutions view the media as avenues of entertainment, as businesses, or as the means to construct identity, they should be aware of the role of wartime and post-war cultural critics in creating those orientations toward culture. **The Cumulative Book Index**, 1992 A world list of books in the English language *Seriously Funny* Gerald Nachman, 2003 The entertaining story of the satirical revolution of the 1950s and 1960s, a genuine comedy renaissance is told through the lives and careers of 25 of the era's greatest comics. Photos throughout Surface Science Russel F. Howe, Robert N. Lamb, Klaus Wandelt, 2013-03-07 Surface science has existed as a recognized discipline for more than 20 years. During this period the subject has expanded in two important ways. On the one hand, the techniques available for studying surfaces, both experimental and theoretical, have grown in number and in sophistication. On the other hand, surface science has been applied to an increasing number of areas of technology, such as catalysis, semiconductor processing, new materials development, corrosion prevention, adhesion, and tribology. There is, however, no sharp division between fundamental and applied surface science. New techniques can immediately be applied to technologically important problems. Improvements in understanding of fundamental phenomena, such as epitaxial growth of one metal on another or the bonding of hydrocarbons to metal surfaces, to name just two examples, have direct consequences for technology. Surface science has also become very much an interdisciplinary subject: physics, chemistry, materials science, chemical and electrical engineering all draw upon and contribute to surface science. The intimate relationship between principles and applications of surface science forms the theme of this proceedings volume. The contributions were all presented as invited lectures at an Australian-German Workshop on Surface Science held at Coogee Beach, Sydney, Australia, in December 1991. The contributors, all active surface scientists in their respective countries, were asked to highlight recent developments in their own areas of activity involving

new techniques advances in fundamental understanding or new applications in technology Chemistry and Physics of Solid Surfaces VIII Ralf Vanselow, Russell Howe, 2012-12-06 This volume contains review articles written by the invited speakers at the ninth International Summer Institute in Surface Science ISSS 1989 held at the University of Wisconsin Milwaukee in August of 1989 During the course of ISSS invited speakers all internationally recognized experts in the various fields of surface science present tutorial review lectures In addition these experts are asked to write review articles on their lecture topic Former ISSS speakers serve as advisors concerning the selection of speakers and lecture topics Emphasis is given to those areas which have not been covered in depth by recent Summer Institutes as well as to areas which have recently gained in significance and in which important progress has been made Because of space limitations no individual volume of Chemistry and Physics of Solid Surfaces can possibly cover the whole area of modern surface science or even give a complete survey of recent progress in this field However an attempt is made to present a balanced overview in the series as a whole With its comprehensive literature references and extensive subject indices this series has become a valuable resource for experts and students alike The collected articles which stress particularly the gas solid interface have been published under the following titles Surface Science Recent Progress and Perspectives Crit Rev Solid State Sci **The American Dream** Time-Life Books, 1998 The 1950 s in America *Surface Analysis Methods in Materials Science* D.J. O'Connor, Brett A. Sexton, Roger St.C. Smart, 2013-04-17 The idea for this book stemmed from a remark by Philip Jennings of Murdoch University in a discussion session following a regular meeting of the Australian Surface Science group He observed that a text on surface analysis and applications to materials suitable for final year undergraduate and postgraduate science students was not currently available Furthermore the members of the Australian Surface Science group had the research experience and range of coverage of surface analytical techniques and applications to provide a text for this purpose A list of techniques and applications to be included was agreed at that meeting The list intended readership of the book has been broadened since the early discussions particularly to encompass industrial users but there has been no significant alteration in content The editors in consultation with the contributors have agreed that the book should be prepared for four major groups of readers senior undergraduate students in chemistry physics metallurgy materials science and materials engineering postgraduate students undertaking research that involves the use of analytical techniques groups of scientists and engineers attending training courses and workshops on the application of surface analytical techniques in materials science industrial scientists and engineers in research and development seeking a description of available surface analytical techniques and guidance on the most appropriate techniques for particular applications The contributors mostly come from Australia with the notable exception of Ray Browning from Stanford University Collected Papers of National Institute for Research in Inorganic Materials , 1982 Index to the Science Fiction Magazines, 1926-1950 Donald Bryne Day, 1982 Comic Book-17ed Robert M.
