Shadows in the Sea Harold W. McCormick, 2017-08-08 Captain Young and I for some years have been gathering material from all over the world about the Selachians the Sharks Skates Rays and their allies of which there are more than 600 known species We originally intended merely to update Captain Young's book *Shark* published by Gotham House in 1934 and now a collector's item but as the material ever expanded it was decided that an entirely new book covering a much broader field was needed. Material was collected from all over the world for many years. When Captain Young and I felt that the research was nearly completed we called upon Tom Allen an experienced newspaperman to aid us in transforming the research material into a book. Tom and I continued the research up to and beyond the completion of the manuscript. Tom also did further research and added new material in the course of writing the book. In all scientific classifications the Selachians are separated clearly from the Teleosteans or Bony Fishes and there are even leading ichthyologists who do not regard the former as fishes at all but rather as representing a separate and distinct Class of animal life. *Shadows in the Sea* Harold Weber McCormick, Thomas Benton Allen, 1963 **Shadows in the Sea. Sharks and Rays

Timothy C. Tricas, Leighton R. Taylor, 1997 Malign and misunderstood sharks are possibly the most feared yet the most fascinating sea creatures. Of about 350 known species of shark only a handful are a threat to humans. In reality it is humans who pose the greater threat hunting and fishing some species to the verge of extinction. Diverse in appearance they range from the tiny cookiecutter or cigar shark to the massive whale shark. Strangers still are the rays with names such as the banded stingray and the Japanese cownose ray. Curiously shaped like craft from outer space some are so highly colored they could be the creation of a whimsical painter. This book represents the most up to date information and thinking on our understanding of these extraordinary inhabitants of the deep: their highly developed senses and intellect and their ecology, biology and behavior. What is being done to protect them? In what ways are they still being exploited? *Sharks and Rays* highlights the advances being made in shark and ray conservation. **The Book Buyer's Guide**, 1962 **Technical**
