Peatland Forestry Ecology And Principles Ecological Studies Vol 111:

Tropical Peatland Ecosystems Mitsuru Osaki, Nobuyuki Tsuji, 2015-12-07 This book is an excellent resource for scientists political decision makers and students interested in the impact of peatlands on climate change and ecosystem function containing a plethora of recent research results such as monitoring sensing modeling for carbon water flux storage biodiversity and peatland management in tropical regions It is estimated that more than 23 million hectares 62 % of the total global tropical peatland area are located in Southeast Asia in lowland or coastal areas of East Sumatra Kalimantan West Papua Papua New Guinea Brunei Peninsular Malaysia Sabah Sarawak and Southeast Thailand Tropical peatland has a vital carbon water storage function and is host to a huge diversity of plant and animal species Peatland ecosystems are extremely vulnerable to climate change and the impacts of human activities such as logging drainage and conversion to agricultural land In Southeast Asia severe episodic droughts associated with the El Niño Southern Oscillation in combination with over drainage forest degradation and land use changes have caused widespread peatland fires and microbial peat oxidation Indonesia's 20 Mha peatland area is estimated to include about 45 55 GtC of carbon stocks As a result of land use and development Indonesia is the third largest emitter of greenhouse gases 2 3 Gtons carbon dioxide equivalent per year 80 % of which is due to deforestation and peatland loss Thus tropical peatlands are key ecosystems in terms of the carbon water cycle and climate change

Humic Substances, Peats and Sludges M H B Hayes, W S Wilson, 1997-01-01 Based on the contributions given at a leading international conference this volume concentrates on developments in the environmentally friendly disposal of sludges and on the reawakened interest in composting which has emerged as a result of significant European directives

Forest Management and the Water Cycle Michael Bredemeier, Shabtai Cohen, Douglas L. Godbold, Elve Lode, Viliam Pichler, Patrick Schleppe, 2010-10-25 The protective function of forests for water quality and water related hazards as well as adequate water supplies for forest ecosystems in Europe are potentially at risk due to changing climate and changing land management practices Water budgets of forest ecosystems are heavily dependent on climate and forest structure The latter is determined by the management measures applied in the forestry sector Various developments of forest management strategies imposed on a background of changing climate are considered in assessing the overall future of forest water interactions in Europe Synthesizing recent research on the interactions of forest management and the water regime of forests in Europe and beyond the book makes an important contribution to the ongoing dialogue between scientists dealing with different scales of forest water interactions This collaborative endeavour which covers geographic and climatic gradients from Iceland to Israel and from southern Spain to Estonia and Finland was made possible through the COST Action Forest Management and the Water Cycle FORMAN which was launched in 2007 <http://www.forestandwater.eu> The book will be of particular interest to the research community involved in forest ecosystem research and forest hydrology as well as landscape ecologists and hydrologists in general It will also provide reference material for forest practitioners and planners

in hydrology and land use **Ecology of Mediterranean Evergreen Oak Forests** Ferran Rodà, 1999 Used by humans since ancient times evergreen oak forests still cover extensive mountain areas of the Mediterranean Basin These broadleaved evergreen forests occupy a transitional zone between the cool temperate deciduous forest biome and the drier Mediterranean pine forests and shrublands Slow growing and casting a deep shade the sclerophyllous holm oak *Quercus ilex* absolutely dominates the closed canopy of many Mediterranean evergreen oak forests This is a synthesis of 20 years of research on the structure function and dynamics of holm oak forests in two intensively studied experimental areas in Spain By combining observational measurements at the leaf tree plot and catchment scales with field experiments and modelling the authors explore how these forests cope with strong water limitation and repeated disturbances **Biodiversity and Ecosystem Processes in Tropical Forests** Gordon H. Orians, Rodolfo Dirzo, J. Hall Cushman, 2012-12-06 Although biologists have directed much attention to estimating the extent and causes of species losses the consequences for ecosystem functioning have been little studied This book examines the impact of biodiversity on ecosystem processes in tropical forests one of the most species rich and at the same time most endangered ecosystems on earth It covers the relationships between biodiversity and primary production secondary production biogeochemical cycles soil processes plant life forms responses to disturbance and resistance to invasion The analyses focus on the key ecological interfaces where the loss of keystone species is most likely to influence the rate and stability of ecosystem processes The Wetlands Handbook, 2 Volume Set Edward Maltby, Tom Barker, 2009-07-23 Forty two chapters by international experts from a wide range of disciplines make The Wetlands Handbook the essential tool for those seeking comprehensive understanding of the subject A departure from more traditional treatises this text examines freshwater wetland ecosystem science from the fundamentals to issues of management and policy Introductory chapters address the scope and significance of wetlands globally for communities culture and biodiversity Subsequent sections deal with processes underpinning wetland functioning how wetlands work their uses and values for humans and nature their sensitivity to external impacts and how they may be restored The text is illustrated by numerous examples emphasising functional and holistic approaches to wetland management including case studies on the wise use and rehabilitation of wetlands in farmed urban industrial and other damaged environments highlighting the long term benefits of multiple use The Wetlands Handbook will provide an invaluable reference for researchers managers policy makers and students of wetland sciences **Ecosystems Biodiversity** Oscar Grillo, Gianfranco Venora, 2011-12-16 Ecosystems can be considered as dynamic and interactive clusters made up of plants animals and micro organism communities Inevitably mankind is an integral part of each ecosystem and as such enjoys all its provided benefits Driven by the increasing necessity to preserve the ecosystem productivity several ecological studies have been conducted in the last few years highlighting the current state in which our planet is and focusing on future perspectives This book contains comprehensive overviews and original studies focused on hazard analysis and evaluation of ecological variables affecting

species diversity richness and distribution in order to identify the best management strategies to face and solve the conservation problems

Ecosystem Approaches to Landscape Management in Central Europe J.D. Tenhunen, R. Lenz, Ralph Hantschel, 2001-01-25 The challenges in ecosystem science encompass a broadening and strengthening of interdisciplinary ties the transfer of knowledge of the ecosystem across scales and the inclusion of anthropogenic impacts and human behavior into ecosystem landscape and regional models The volume addresses these points within the context of studies in major ecosystem types viewed as the building blocks of central European landscapes The research is evaluated to increase the understanding of the processes in order to unite ecosystem science with resource management The comparison embraces coastal lowland forests associated wetlands and lakes agricultural land use and montane and alpine forests Techniques for upscaling focus on process modelling at stand and landscape scales and the use of remote sensing for landscape level model parameterization and testing The case studies demonstrate ways for ecosystem scientists managers and social scientists to cooperate

Canadian Journal of Forest Research ,2016-10 **Baltic Forestry** ,2006 *Suo* ,1998 **Encyclopedia of Environmental Analysis and Remediation, Volume 3** Robert A. Meyers,1998 With the growing concern over the environment new industries and research areas have been developed to identify monitor regulate and legislate environmental interactions as well as to determine and repair existing environmental damage For both the expert and the newcomer a quick convenient and comprehensive source is needed to answer questions on the rapidly increasing amount of environmental information The Encyclopedia of Environmental Analysis and Remediation EEAR responds to this need by providing the reader with an in depth examination of the environmental analysis and remediation fields in a single eight volume reference source

Peatland Forestry Eero Paavilainen, Juhani Päivänen, 1995-04-13 The book provides a review and synthesis of boreal mire ecosystems including peat soil properties mire hydrology carbon and nutrient cycling and classification of mire sites The emphasis however is on peatland forests as a renewable natural resource The approach originated in northern Europe because there especially in Finland operational scale forest drainage has a long tradition based on research aiming to maintain and increase wood production on peatlands Whenever relevant a closer look is also given to other countries in Europe Canada and the USA The results of recent studies on different environmental effects of peatland forestry are also discussed in detail
