Peatlands and Environmental Change Dan Charman, 2002-11-22 Due to an awareness of peatlands as a diminishing resource peatland conservation and rehabilitation has become an important study area Peatlands and Environmental Change offers a new approach by considering peatlands as a whole ecosystem and thereby provides a better understanding of the importance and the consequences of the functioning of peatlands Contents include Peat and peatlands Peat landforms and structure Peatland hydrology and ecology Origins and peat initiation Peat accumulation The peatland archive palaeoenvironmental evidence Autogenic change Allogenic change Peatland environmental feedbacks Values exploitation and human impacts Conservation management and restoration

Peatlands and Climate Change Maria Strack, 2008 The International Peat Society IPS established a joint IPS Working Group on Peatlands and Climate Change in the end of the year 2005 The Working Group's task was to compile information into a summary of available knowledge to help the IPS and other actors to understand the role of peatlands and peat within the current context of global climate change

Peatlands I.P. Martini, A. Martinez Cortizas, W. Chesworth, 2007-03-28 In the past two decades there has been considerable work on global climatic change and its effect on the ecosphere as well as on local and global environmental changes triggered by human activities From the tropics to the Arctic peatlands have developed under various geological conditions and they provide good records of global and local changes since the Late Pleistocene The objectives of the book are to analyze topics such as geological evolution of major peatlands basins peatlands as self sustaining ecosystems chemical environment of peatlands water and peat chemistry peatlands as archives of environmental changes influence of peatlands on atmosphere circular complex interactions remote sensing studies of peatlands peatlands as a resource peatlands degradation restoration plus more Presents an interdisciplinary approach with an emphasis on Earth Science and addresses the need for intergration between subdisciplines and the developing of new approaches Synthesizes the evolutionary ecological and chemical characteristics of major peatlands as well as focuses on the environmental changes from climate changes to surface area changes due to human activities Covers topical studies of worldwide interest and provides examples from many different countries

Peatlands, climate change mitigation and biodiversity conservation Hans Joosten, 2015-04-27 Did you know that peatlands hold more carbon than all forests of the world combined drained peatlands are responsible for 25% of total CO₂ emissions in the Nordic and Baltic countries rewetting of peatlands substantially reduces these emissions This policy brief pleads for increased commitments to conserving and rewetting peatlands for abolishing regulations that drive peatland drainage for changing drained peatland use to paludicultures and for setting up good practice demonstration projects It stresses the need for better communicating the benefits of wet peatlands and the costs arising from damaged ones Finally it highlights the role of peatland rewetting and restoration in reaching national and international policy targets for climate change mitigation water quality improvement and biodiversity conservation

Peatland Restoration and

Ecosystem Services Aletta Bonn,Tim Allott,Martin Evans,Hans Joosten,Rob Stoneman,2016-06-23 Peatlands provide globally important ecosystem services through climate and water regulation or biodiversity conservation While covering only 3% of the earth s surface degrading peatlands are responsible for nearly a quarter of carbon emissions from the land use sector Bringing together world class experts from science policy and practice to highlight and debate the importance of peatlands from an ecological social and economic perspective this book focuses on how peatland restoration can foster climate change mitigation Featuring a range of global case studies opportunities for reclamation and sustainable management are illustrated throughout against the challenges faced by conservation biologists Written for a global audience of environmental scientists practitioners and policy makers as well as graduate students from natural and social sciences this interdisciplinary book provides vital pointers towards managing peatland conservation in a changing environment

size and function have attracted extensive attention from researchers globally However there are still many uncertainties about the variety of wetland and grassland ecosystem composition structure and dynamics as well as how they respond and adapt to climate change and human activities

Environmental Law Anastasia Telesetsky, An Cliquet, Afshin Akhtar-Khavari, 2016-12-01 Human activities are depleting ecosystems at an unprecedented rate In spite of nature conservation efforts worldwide many ecosystems including those critical for human well being have been damaged or destroyed States and citizens need a new vision of how humans can reconnect with the natural environment With its focus on the long term holistic recovery of ecosystems ecological restoration has received increasing attention in the past decade from both scientists and policymakers Research on the implications of ecological restoration for the law and law for ecological restoration has been largely overlooked This is the first published book to examine comprehensively the relationship between international environmental law and ecological restoration While international environmental law IEL has developed significantly as a discipline over the past four decades this book enquires whether IEL can now assist states in making a strategic transition from not just protecting and maintaining the natural environment but also actively restoring it Arguing that states have international duties to restore this book offers reflections on the philosophical context of ecological restoration and the legal content of a duty to restore from an international law European Union law and national law perspective The book concludes with a discussion of several contemporary themes of interest to both lawyers and ecologists including the role of private actors protected areas and climate change in ecological restoration

Peatlands Ian D. Rotherham, 2020-04-28 This book provides an introduction to peatlands for the non specialist student reader and for all those concerned about environmental protection and is an essential guide to peatland history and heritage for scientists and enthusiasts Peat is formed when vegetation partially decays in a waterlogged environment and occurs extensively throughout both temperate and tropical regions Interest in peatlands is currently high due to the degradation of global peatlands which is disrupting hydrology and contributing to greenhouse gas emissions This book opens by explaining how peat is formed its properties and worldwide distribution and defines related terms such as mires wetlands bogs and marshes There is discussion of the ecology and wildlife of peatlands as well as their ability to preserve pollen and organic remains as environmental archives It also addresses the history heritage and cultural exploitation of peat extending back to pre Roman times and the degradation of peatlands over the centuries particularly as a source of fuel but more recently for commercial horticulture Other chapters discuss the ecosystem services delivered by peatlands and how their destruction is contributing to biodiversity loss flooding or drought and climate change Finally the many current peatland restoration projects around the world are highlighted Overall the book provides a wide ranging but concise overview of peatlands from both a natural and social science perspective and will be invaluable for students of
