wildly high in Sigizmund Krzhizhanovsky's fantastic and blackly comic philosophical fables which abound in nested narratives and wild paradoxes. This new collection of eleven mind bending and spellbinding tales includes some of Krzhizhanovsky's most dazzling conceits: a provincial journalist who moves to Moscow finds his existence consumed by the autobiography of his room's previous occupant; the fingers of a celebrated pianist's right hand run away to spend a night alone on the city streets; a man's lifelong quest to bite his own elbow inspires both a hugely popular circus act and a new refutation of Kant. Ordinary reality cracks open before our eyes in the pages of *Autobiography of a Corpse* and the extraordinary spills out. Harmony, Perspective, and Triadic Cognition Norman D. Cook, 2012. The big question in the science of psychology is why is human cognition and behavior so different from the capabilities of every other animal species on Earth including our close genetic relations the chimpanzees. This book provides a coherent answer by examining those aspects of the human brain that have made triadic forms of perception and cognition possible. Mechanisms of dyadic association sufficiently explain animal perception, cognition and behavior but a three way associational mechanism is required to explain the human talents for language, tool making, harmony, perception, pictorial depth perception and the joint attention that underlies all forms of social cooperation.
