Handbook of Research on Using Educational Robotics to Facilitate Student Learning Papadakis, Stamatios,Kalogiannakis, Michail,2020-12-05 Over the last few years increasing attention has been focused on the development of children s acquisition of 21st century skills and digital competences Consequently many education scholars have argued that teaching technology to young children is vital in keeping up with 21st century employment patterns Technologies such as those that involve robotics or coding apps come at a time when the demand for computing jobs around the globe is at an all time high while its supply is at an all time low There is no doubt that coding with robotics is a wonderful tool for learners of all ages as it provides a catalyst to introduce them to computational thinking algorithmic thinking and project management Additionally recent studies argue that the use of a developmentally appropriate robotics curriculum can help to change negative stereotypes and ideas children may initially have about technology and engineering The Handbook of Research on Using Educational Robotics to Facilitate Student Learning is an edited book that advocates for a new approach to computational thinking and computing education with the use of educational robotics and coding apps The book argues that while learning about computing young people should also have opportunities to create with computing which have a direct impact on their lives and their communities It develops two key dimensions for understanding and developing educational experiences that support students in engaging in computational action 1 computational identity which shows the importance of young people s development of scientific identity for future STEM growth and 2 digital empowerment to instill the belief that they can put their computational identity into action in authentic and meaningful ways Covering subthemes including student competency and assessment programming education and teacher and mentor development this book is ideal for teachers instructional designers educational technology developers school administrators academicians researchers and students

Artificial Intelligence from Science Fiction to Reality Emanuel Camilleri,2025-11-03 Artificial Intelligence from Science Fiction to Reality examines various aspects starting with the evolution of human and artificial intelligence AI It places AI in its proper context and discusses non technical aspects such as philosophical and social issues The major challenge leaders are likely to encounter is deciding what functions are to be entrusted to AI and how humanity

can exercise control over them The book also focuses on the hardware and software technology that support AI and the essential cyber security systems that are required to address the evolving AI threat landscape It examines centres for AI safety that are nonprofit research organisations which focus on the mitigation of AI risks by proposing solutions against threat actors The book discusses the knowledge based economy particularly Enterprise AI and examines the ethical and legal issues that emerge from the practical implications of AI While most governments have endorsed voluntary ethical and moral charters there is a reluctance to introduce binding legislative measures This reluctance is based on the premise that specific laws might hinder AI innovation Furthermore detailed private and public sector case studies are presented that demonstrate how AI applications may be successfully implemented according to a practical framework A detailed discussion about the implications for human development is presented The differences between key economic approaches such as knowledge based economy digital economy and automated economy are examined and how these will be impacted by AI in relation to job displacement data privacy and security and algorithmic bias Finally the book also examines the era beyond AI where organoid intelligence is emerging It explores future human development where humans could be turned into cyborgs with hi tech machine implants re growable limbs and nanotechnology that repair damaged tissue rejuvenating human cells leading to immortality
