Building Engineering Facing the Challenges of the 21st Century David Bienvenido-Huertas, Joaquín

Durán-Álvarez, 2023-07-24 Building engineering is a complex and constantly evolving branch. The needs of the XXI century society cause a constant change in construction industry due to the need to achieve sustainable and ecological buildings. This affects all levels and phases of this engineering. Given this circumstance, numerous researchers turn their efforts to find optimal solutions for building engineering. For this reason, in this book, a holistic analysis of building engineering is carried out from the perspectives that have a greater weight for sustainability objectives. The book is divided into 6 sections: i Building materials, which deals with research related to the most innovative and sustainable building materials; ii Design and construction, which deals with existing methodologies and advances in design and construction in the construction sector; iii Building repair and maintenance, which deals with building repair, maintenance, and upkeep techniques; iv Energy efficiency, which analyses the latest research on the energy efficiency of buildings and their behaviour in the face of climate change; v Sustainability, which analyses the establishment of measures to achieve a more sustainable built environment; and vi construction management, which compiles the latest studies in the field of Project management. The 38 chapters of the book together constitute an advance for the topic of building engineering. The aspects covered in the book are of great interest to various sectors such as researchers, engineers, architects, legislators, and interested parties. *PC Mag*, 1988-09-27 *PCMag.com* is a leading authority on technology, delivering Labs-based independent reviews of the latest products and services.
