Hematopoietic Stem Cell Biology Motonari Kondo, 2009-12-04 In the summer of 1988 my developmental biology professor announced to the class that hematopoietic stem cells HSCs had finally been purified Somehow I never forgot the professor's words When I started working in Dr Irwin Weissman's laboratory at Stanford as a postdoctoral fellow I realized that the findings mentioned by the professor were from Weissman's laboratory and had been published in a 1988 edition of the journal *Science* It has been over 20 years since the publication of that seminal paper and since then tremendous advances in understanding the biology and maturation of HSCs namely the process of hematopoiesis which includes lymphocyte development have been made These discoveries were made possible in part by advancements in technology For example recent availability of user friendly fluorescence activated cell sorting FACS machines and monoclonal antibodies with a variety of fluorescent labels has allowed more scientists to sort and analyze rare populations in the bone marrow such as HSCs All classes of hematopoietic cells are derived from HSCs Stem cell biology draws enormous attention not only from scientists but also from ordinary people because of the tremendous potential for development of new therapeutic application to diseases that currently lack any type of effective therapy Thus this type of regenerative medicine is a relatively new and attractive field in both basic science and clinical medicine
