**Assessment of Traffic Control Practices with Respect to Older Drivers** Eric Meyer (Ph. D.), 2007 When signage on a rural highway in Kansas was upgraded the State received some comments that begged the question of whether modern highly reflective sign sheeting materials could in some circumstances actually decrease the legibility of signage particularly for older drivers Older drivers tend to have poorer visual acuity requiring larger signs to provide the same legibility as found in a younger population However older drivers also tend to be more sensitive to glare and slower to recover from glare blindness This study was

conducted to determine if highly reflective sheeting could cause a reduction in sign legibility due to veiling glare especially in older drivers The test was conducted using 60 drivers in an actual automobile and full scale signs and distances The data collection was conducted in a test facility where external factors could be eliminated isolating the variables of greatest interest Older drivers as a whole were found to exhibit poorer performance in terms of visual acuity and response time but no detrimental effects attributable to glare were observed AV Guide ,1988 *Best Career and Education Web Sites* Rachel Singer Gordon,Anne Wolfinger,2004 The Internet is loaded with information to help you find a job choose a school or learn about careers That s great if you know how to find what you re looking for But if you don t it s easy to get bogged down in information overload That s where this book comes in In this all new fourth edition we ve researched and reviewed the many thousands of career job search and education sites on the Web and include only the very best places for solid information and advice No more wading through site after site this book has already done all of the hard work for you Book jacket **The Century Dictionary and Cyclopedia: Dictionary** William Dwight Whitney,Benjamin Eli Smith,1897 International Journal of Religious Education ,1939 *China's Millions* ,1884 **Field Evaluation of Unlighted Overhead Guide Signs Using Older Drivers** Helmut T. Zwahlen,2003 Twenty older drivers aged 63 to 81 average 72 1 with corrected visual acuity ranging from 20 20 to 20 29 average 20 25 evaluated six sign material and lighting combinations under nighttime conditions on US Route 30 near Mansfield Ohio The tested material combinations all unlighted unless noted otherwise were legend on background beaded Type III on beaded Type III lighted beaded Type III on beaded Type III Type VIII on microprismatic Type III Type IX on beaded Type III Type IX on Type IX and Type VII on beaded Type III Evaluators sat in the passenger seat and middle center seat of a 2002 Dodge Caravan Headlights were kept on low beam The evaluation loop was driven twice once approaching signs in the left lane and once approaching in the right lane The evaluators completed questionnaires regarding sign visibility legibility and appearance after driving under each sign group and also an exit interview on the same topics at the end of the evaluation Based on questionnaire responses the highest rated sign groups in terms of legibility and visibility were Type IX on Type IX and Type VII on beaded Type III which in the exit interview were deemed acceptable for nighttime use by 80% and 65% of evaluators respectively In contrast the lighted beaded Type III on beaded Type III sign representing existing signing practice in Ohio was deemed acceptable by only 40 45% of evaluators The Type VIII on microprismatic Type III sign performed about as well as the lighted sign group receiving higher scores on the relevant questions on the Exit Interview 60% for legibility 55% for visibility but performing worse on the Sign Evaluation Forms The Type IX on beaded Type III a favored option in the previous study performed noticeably still worse and the unlighted beaded Type III on beaded Type III had the worst performance overall as was the case in the previous study Given that the Type IX on Type IX and Type VII on beaded Type III was clearly favored by evaluators over the lighted sign group it appears that switching from lighted signs to unlighted signs using Type VII on beaded Type III or Type IX on Type IX materials may represent an actual

improvement for older drivers in addition to having benefits in terms of saving on electricity lighting maintenance costs and worker traffic hazards With the greater needs of older drivers the use at short distance of Type IX on Type IX signs instead of the previously suggested Type IX on beaded Type III is recommended     Wide Awake ,1888     *Public Works Manual* ,1981
