Utoomprurkporn, Marousa Pavlou, Dimitrios Kikidis, Christos Nikitas, 2025-10-13 Balance control is a complex process that is vulnerable to the effects of aging and cognitive decline as well as various neurological factors such as Parkinson s disease Lewy body dementia LBD and Frontotemporal dementia FTD These conditions affect different parts of the brain leading to diverse symptoms and increasing the risk of falls which coexist with multiple comorbidities including stroke mild cognitive impairment vestibular disorders and long COVID 19 Recent studies have shown that both static and dynamic balance is impaired in individuals with mild cognitive impairment MCI and these impairments worsen under cognitive challenges such as multitasking Impaired balance and dizziness are consistently identified as risk factors for falls negatively impacting quality of life with significant physical psychosocial and healthcare related consequences Multimodal multifaceted falls prevention programs targeting the specific needs of high risk individuals are essential However there is a lack of access to falls specialist services around the globe insufficient integrated clinician education and a shortage of well trained clinicians to provide individualized falls assessment and care This is particularly crucial given the neurological complexities of conditions like Parkinson s LBD and FTD Additionally patient adherence to existing exercise programs is poor with 70% dropping out early Balance physiotherapy is a key intervention for falls prevention and it is imperative to develop comprehensive individualized multifactorial balance rehabilitation programs Technology based solutions can help address these issues by increasing accessibility and adherence providing wider and easier home based access to high quality falls services and interventions Lifestyle Medicine Ifeoma Monye, Adaeze Ifezulike, Karen Adamson, Fraser Birrell, 2021-09-20 LIFESTYLE
