Power Of Flow:

Power-Flow Modelling of HVDC Transmission Systems Shagufta Khan, Suman Bhowmick, 2022-12-23 This book deals exclusively with the power flow modelling of HVDC transmission systems. Different types of HVDC transmission systems, their configurations, connections, and control techniques are covered in detail. Power flow modelling of both LCC and VSC based HVDC systems is covered in this book. Both the unified and the sequential power flow methods are addressed. DC grid power flow controllers and renewable energy resources like offshore wind farms (OWFs) are also incorporated into the power flow models of VSC HVDC systems. The effects of the different power flow methods and HVDC control strategies on the power flow convergence are detailed along with their implementation. Features: Introduces the power flow concept and develops the power flow models of integrated AC/DC systems. Different types of converter control are modelled into the integrated AC/DC power flow models developed. Both unified and the sequential power flow methods are addressed. DC grid power flow controllers like the IDCPF and renewable energy resources like offshore wind farms (OWFs) are introduced and subsequently modelled into the power flow algorithms. Integrated AC/DC power flow models developed are validated by implementation in the IEEE 300 bus and European 1354 bus test networks incorporating different HVDC grids. This book aims at researchers and graduate students in Electrical Engineering, Power Systems, and HVDC Transmission.

Energy Flow Theory of Nonlinear Dynamical Systems with Applications Jing Tang Xing, 2015-05-28 This monograph develops a generalised energy flow theory to investigate non-linear dynamical systems governed by ordinary differential equations in phase space and often met in various science and engineering fields. Important nonlinear phenomena such as stabilities, periodical orbits, bifurcations, and chaos are tackled and the corresponding energy flow behaviors are revealed using the proposed energy flow approach. As examples, the common interested nonlinear dynamical systems such as Duffing's oscillator, Van der Pol's equation, Lorenz attractor, Rossler one, and SD oscillator etc. are discussed. This monograph lights a new energy flow research direction for nonlinear dynamics. A generalised Matlab code with User Manual is provided for readers to conduct the energy flow analysis of their nonlinear dynamical systems. Throughout the monograph, the author continuously returns to some examples in each chapter to illustrate the applications of the discussed theory and approaches. The book can be used as an undergraduate or graduate textbook or a comprehensive source for scientists, researchers, and engineers providing the statement of the art on energy flow or power flow theory and methods.
