Proceedings of 3rd International Conference on Computing Informatics and Networks Ajith Abraham, Oscar Castillo, Deepali Virmani, 2021-03-14 This book is a collection of high quality peer reviewed research papers presented in the Third International Conference on Computing Informatics and Networks ICCIN 2020 organized by the Department of Computer Science and Engineering CSE Bhagwan Parshuram Institute of Technology BPIT Delhi India during 29 30 July 2020 The book discusses a wide variety of industrial engineering and scientific applications of the emerging techniques Researchers from academic and industry present their original work and exchange ideas information techniques and applications in the field of artificial intelligence expert systems software engineering networking machine learning natural language processing and high performance computing *Emerging Real-World Applications of Internet of Things* Anshul Verma, Pradeepika Verma, Yousef Farhaoui, Zhihan Lv, 2022-11-24 The Internet of things IoT is a network of connected physical objects or things that are working along with sensors wireless transceiver modules processors and software required for connecting processing and exchanging data among the other devices over the Internet These objects or things are devices ranging from simple handheld devices to complex industrial heavy machines A thing in IoT can be any living or non living object that can be provided capabilities to sense process and exchange data over a network The IoT provides people with the ability to handle their household works to industrial tasks smartly and efficiently without the intervention of another human The IoT provides smart devices for home automation as well as business solutions for delivering insights into everything from real time monitoring of working systems to supply chain and logistics operations The IoT has become one of the most prominent technological inventions of the 21st century Due to the versatility of IoT devices there are numerous real world applications of the IoT in various domains such as smart home smart city health care agriculture industry and transportation The IoT has emerged as a paradigm shifting technology that is influencing various industries Many companies governments and civic bodies are shifting to IoT applications to improve their works and to become more efficient The world is slowly transforming toward a smart world with smart devices As a consequence it shows many new opportunities coming up in the near smart future for IoT professionals Therefore there is a need to keep track of advancements related to IoT applications and further investigate several research challenges related to the applicability of IoT in different domains to make it more adaptable for practical and industrial use With this goal this book provides the most recent and prominent applications of IoT in different domains as well as issues and challenges in developing IoT applications for various new domains *ECAI 2016* G.A. Kaminka, M. Fox, P. Bouquet, 2016-08-24 Artificial Intelligence continues to be one of the most exciting and fast developing fields of computer science This book presents the 177 long papers and 123 short papers accepted for ECAI 2016 the latest edition of the biennial European Conference on Artificial Intelligence Europe's premier venue for presenting scientific results in AI The conference was held in The Hague the Netherlands from August 29 to

September 2 2016 ECAI 2016 also incorporated the conference on Prestigious Applications of Intelligent Systems PAIS 2016 and the Starting AI Researcher Symposium STAIRS The papers from PAIS are included in this volume the papers from STAIRS are published in a separate volume in the Frontiers in Artificial Intelligence and Applications FAIA series Organized by the European Association for Artificial Intelligence EurAI and the Benelux Association for Artificial Intelligence BNVKI the ECAI conference provides an opportunity for researchers to present and hear about the very best research in contemporary AI This proceedings will be of interest to all those seeking an overview of the very latest innovations and developments in this field

Machine Learning for Complex and Unmanned Systems Jose Martinez-Carranza, Everardo Inzunza-Gonzalez, Enrique Efren Garcia-Guerrero, Esteban Tlelo-Cuautle, 2024-02-21 This book highlights applications that include machine learning methods to enhance new developments in complex and unmanned systems The contents are organized from the applications requiring few methods to the ones combining different methods and discussing their development and hardware software implementation The book includes two parts the first one collects machine learning applications in complex systems mainly discussing developments highlighting their modeling and simulation and hardware implementation The second part collects applications of machine learning in unmanned systems including optimization and case studies in submarines drones and robots The chapters discuss miscellaneous applications required by both complex and unmanned systems in the areas of artificial intelligence cryptography embedded hardware electronics the Internet of Things and healthcare Each chapter provides guidelines and details of different methods that can be reproduced in hardware software and discusses future research Features Provides

details of applications using machine learning methods to solve real problems in engineering Discusses new developments in the areas of complex and unmanned systems Includes details of hardware software implementation of machine learning methods Includes examples of applications of different machine learning methods for future lines for research in the hot topic areas of submarines drones robots cryptography electronics healthcare and the Internet of Things This book can be used by graduate students industrial and academic professionals to examine real case studies in applying machine learning in the areas of modeling simulation and optimization of complex systems cryptography electronics healthcare control systems Internet of Things security and unmanned systems such as submarines drones and robots

Sensor-Based Human Activity Recognition for Assistive Health Technologies Muhammad Adeel Nisar,2023-02-20 The average age of people has increased due to advances in health sciences which has led to an increase in the elderly population This is positive news but it also raises questions about the quality of independent living for older people Clinicians use Activities of Daily Living ADLs to assess older people's ability to live independently In recent years portable computing devices have become more present in our daily lives Therefore a software system that can detect ADLs based on sensor data collected from wearable devices is beneficial for detecting health problems and supporting health care In this context this book presents several machine learning based approaches for human activity recognition HAR using time series data collected by wearable sensors in the home environment In the first part of the book machine learning based approaches for atomic activity recognition are presented which are relatively simple and short term activities In the second part the algorithms for detecting long term and complex ADLs are presented In this part a two stage recognition framework is also presented as well as an online recognition system for continuous monitoring of HAR In the third and final part a novel approach is proposed that not only solves the problem of data scarcity but also improves the performance of HAR by implementing multitask learning based methods The proposed approach simultaneously trains the models of short and long term activities regardless of their temporal scale The results show that the proposed approach improves classification performance compared to single task learning
