**The Ketogenic Diet** Lyle McDonald, 1998      **Stop Alzheimer's Now!** Bruce Fife, 2016-04-11 Over 35 million people have dementia today Each year 4 6 million new cases occur world wide one new case every 7 seconds Alzheimer s disease is the most common form of dementia Parkinson s disease another progressive brain disorder affects about 4 million people world wide Millions more suffer with other neurodegenerative disorders The number of people affected by these destructive diseases continues to increase every year Dementia and other forms of neurodegeneration are not a part of the normal ageing process The brain is fully capable of functioning normally for a lifetime regardless of how long a person lives While ageing is a risk factor for neurodegeneration it is not the cause Dementia and other neurodegenerative disorders are disease processes that can be prevented and successfully treated This book outlines a program using ketone therapy and diet that is backed by decades of medical and clinical research and has proven successful in restoring mental function and improving both brain and overall health You will learn how to prevent and even reverse symptoms associated with Alzheimer s disease Parkinson s disease amyotrophic lateral sclerosis ALS multiple sclerosis MS Huntington s disease epilepsy diabetes stroke and various forms of dementia The information in this book is useful not only for those who are suffering from neurodegenerative disease but for anyone who wants to be spared from ever encountering one or more of these devastating afflictions These diseases don t just happen overnight They take years often decades to develop In the case of Alzheimer s disease approximately 70 percent the brain cells responsible for memory are destroyed before symptoms become noticeable You can stop Alzheimer s and other neurodegenerative diseases before they take over your life The best time to start is now

Drop Fat The low Carb Way Alexsandra Stevens, 2021 Weight gain and obesity have become causes of health concerns in the western world Obesity in particular is one of the leading causes of preventable death in the world today Studies have been conducted to establish the reasons why the world population seems to be gaining weight Research has shown for instance that the general weight of the population today is much higher than it was in the 1960s What are the factors that have contributed to this turn of events and what are the intervention measures that can be instituted to control it Studies have shown that although our children still engage in physical exercises just like the children of yester years they still add weight and in some cases get obese For the older people lack of exercise among other issues has been cited a reason for weight gain or becoming fat Obesity and weight gain have been attributed to the foods we eat Research shows that we have increased our food intake which unfortunately contains a higher percentage of sugar than what the world population used to ingest about fifty years ago Also the amount of fat that we eat has considerably increased This coupled with lack of exercise have been cited as the leading causes of weight gain It s an established fact that when we get large portions of fatty foods creamy desserts alcohol and soft drinks full of sugar our calorie intake gets higher With a higher calorie intake we are expected to do a lot of exercises to burn the excess calories If this is not done there is a calorie pile up that leads to weight

gain The solution to these problems lies in the ability to change our eating habits One way of controlling unnecessary weight gain is the eating low carb foods This way the amount of calories in the food is closely controlled and helps in making one healthier Low Carb diets have been defined differently depending on whether the point of discussion is centred on the amount of calories derived from carbohydrates or the percentage of carbohydrates in a diet Generally though low carb diets can be described as those diets that help the body to derive between 5% to 45 % of calories from Carbohydrates The normal percentage of calories that is supposed to be derived from Carbohydrates according to the U S guidelines on health is between 50% to 65% Therefore a low carb diet refers to a conscious effort to try and limit the intake of foods with high carbohydrate levels especially those that cause a significant rise in blood sugar Although the debate on the advantages of a low carb diet is still going on it s true that the tolerance of carbohydrates in the body varies from person to person This type of diet then will suit or benefit those who are sensitive or whose tolerance to carbohydrates is low The approach is to encourage the reduction of the intake of carbohydrates to levels that the body can tolerate This approach targets the reduction or elimination from our diets foods like potatoes white rice white flour and sugar from the diet The reduction of carbohydrates intake has been known to cause weight loss in people To control this a low carb diet should be closely monitored so that immediately signs of weight loss are noticed the intake of carbohydrates is slowly increased until the body can control blood glucose It s also advisable to embrace the ketogenic diet where the body generates energy from body fats instead of glucose This leads the body into what is called fat adaptation or ket adaptation This adaptation encourages body metabolism which leads to improvement of stamina Energy from fat is long lasting unlike energy from glucose which quickly diminishes
