Social Change in China Gerard A. Postiglione, 2006 Market reform financial decentralization and economic globalization have greatly accentuated China's social and regional inequalities Education is expected to address these inequalities in a context of rapid social change including the rise of an urban middle class changed status of women resurgence of ethnic identities growing rural to urban migration and lingering poverty in remote areas But some argue that state policies have not sufficiently addressed inequitable practices and that schools actually perpetuate and reproduce inequities giving rise to a new system of social stratification driven more by market forces than socialist principles Featuring all original previously unpublished material this volume examines this argument through analysis of selected aspects of educational stratification in China during the reform era Chapters focus on the new urban middle class poor rural residents the migrant population in urban areas rural girls and ethnic minorities The contributors are established scholars in the field and they build a conceptual framework for assessing the degree to which China's educational reforms are inclusive equitable and integrative across social categories and groups

Contemporary Minority Migration, Education, and Ethnicity in China Robyn R. Iredale, Naran Bilik, Wang Su, Fei Guo, Caroline Hoy, 2001 Rural urban migration is an important aspect in the development of countries Until the late 1980s China was one of the few countries that controlled population movement both directly and indirectly through policies of economic and social control The gradual relaxation of these policies has resulted in greater freedom of movement for the population the effects of which are discussed in this significant volume The book concentrates on the migration of minorities from a social economic and ethnic perspective and attempts to quantify the overall level of movement In particular the authors examine the relationships between education ethnicity and migration and identify the policies and conditions conducive to achieving positive outcomes for minority migrant households The book aims to increase our understanding of the effects of movement on the social economic and ethnic status of migrant families Taking existing census data as a starting point the book makes a new contribution by drawing on a unique survey in four different regions the data from which is used as the basis for detailed case study analysis The study of internal migration is vital the authors argue in order to understand the change process from a centrally planned economic system to a market orientated society in China The internal mobility of minorities can be regarded equally as both a product of and a contributing factor to this social transformation This notable and very readable book will be of significant interest to policymakers international and development economists and researchers and students of Asian economics and demographics

State Growth and Social Exclusion in Tibet Andrew Martin Fischer, 2005 The most pressing economic challenges facing the Tibetan areas of western China relate to the marginalization of the majority of Tibetans from rapid state led growth The urban rural divide plays an important role in this polarized dynamic but alone only partially explains differences with other Chinese regions all of which generally exhibit strong spatial inequalities This book therefore focuses on several further factors that determine the ethnically exclusionary character of current peripheral growth in the Tibetan areas These include processes of urbanization
